<b>MHS Conveyor INFORMATION.....</b>	<b>152</b>

# Chapter 1: IOM INTRODUCTION

## IOM Purpose

It is the intent of MHS Conveyor, through this manual, to provide information that acts as a guide in the installation, operation, and maintenance of MHS Conveyor conveyors.

This manual describes basic installation practices, assembly arrangements, preventive maintenance, and assists in replacement parts identification.

This service manual is intended for use by personnel who are knowledgeable of installation and safe working practices on conveyor systems.

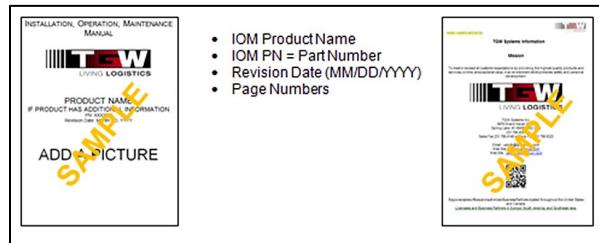

Not all applications and conditions can be covered; therefore, this manual is to be used ONLY as a guide.

If additional copies of this manual are needed or if you have any question concerning the conveyor please contact your MHS Conveyor Distributor or MHS Conveyor Lifetime Services at 231-798-4547.

Visit MHS Conveyor at [mhs-conveyor.com](http://mhs-conveyor.com) for maintenance videos and other application information.

## Manual Structure

You should receive a separate documentation for each product line of MHS Conveyor implemented in your installation. You can identify the respective product line on the back of the folder or on the cover sheet of the IOM (Installation Operation Maintenance Manual)

## WARNING

- Pay attention to the safety instructions!
- Prior to working at or in the immediate vicinity of the system it is recommended that you make yourself familiar with the safety instructions included in the present document!

## Chapter 2: MHS Conveyor POLICIES

### MHS Conveyor Equipment Warranty

MHS Conveyor warrants that the material and workmanship entering into its equipment is merchantable and will be furnished in accordance with the specifications stated.

MHS Conveyor agrees to furnish the purchaser without charge any part proved defective within 2 years from date of shipment provided the purchaser gives MHS Conveyor immediate notice in writing and examination proves the claim that such materials or parts were defective when furnished. For drive components specific to XenoROL® (i.e. Xeno belts, slave Xeno belts, drive spools, standard and speed-up, and spacers), this warranty shall be extended to five years of running use, provided the conveyors are applied, installed and maintained in accordance with MHS Conveyor published standards. Other than the above, there are no warranties which extend beyond the description on the face hereof. Consequential damages of any sort are wholly excluded.

The liability of MHS Conveyor will be limited to the replacement cost of any defective part. All freight and installation costs relative to any warranted part will be at the expense of the purchaser. Any liability of MHS Conveyor under the warranties specified above is conditioned upon the equipment being installed, handled, operated, and maintained in accordance with the written instructions provided or approved in writing by MHS Conveyor.

The warranties specified above do not cover, and MHS Conveyor makes no warranties which extend to, damage to the equipment due to deterioration or wear occasioned by chemicals, abrasion, corrosion or erosion; Purchaser's misapplication, abuse, alteration, operation or maintenance; abnormal conditions of temperature or dirt; or operation of the equipment above rated capacities or in an otherwise improper manner.

**THERE ARE NO WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO,  
WARRANTIES OF MERCHANTABILITY OR FITNESS FOR  
A PARTICULAR PURPOSE, EXTENDING BEYOND  
THOSE SET FORTH IN THIS STATEMENT OF  
WARRANTY.**

Rev 9/23/2016

### MHS Conveyor Environment Standards

MHS Conveyor equipment is designed to be installed in a clean, dry warehouse environment. Exposure to extreme humidity, direct sunlight, blowing dirt or rain can permanently damage some components of MHS Conveyor. In particular, the curing agents in concrete are known to attack and degrade the urethane conveyor components.

When installing conveyor on a new construction site, be sure that the concrete is properly cured before setting conveyor on it. In addition, if conveyors are stored in the proximity of curing concrete, proper ventilation must be used to direct the curing agent fumes away from the conveyor.

Failure to comply with these guidelines will void the MHS Conveyor warranty on any failed components that result from these environment issues.

## Chapter 3: SAFETY RECOMMENDATIONS

### MHS Conveyor Safety Recommendation

#### For additional safety information:

MHS Conveyor agrees to the following safety instruction or guidelines listed within this manual. This is not to conflict with your state or legal requirements.

MHS Conveyor Recommends for maintenance or repair purposes, to incorporate a lock out or tag procedure. To ensure all starting devices, prime movers, or powered accessories are off before attempting to maintenance or repair.

The procedures below are designed to protect everyone involved with the conveyor against an unexpected restart. To include understanding of potential hazard of stored energy, which can exist after the power source is locked out.

For additional information, refer to the latest issue of ANSI Z244.1, American National Standard for Personnel Protection – Lockout/Tagout of Energy Sources- Minimum Safety Requirements.

<http://www.ansi.org/>

**OSHA 29CFR Part 1910.147 “Control of Hazardous Energy Sources (Lockout/Tagout)”,** which includes requirements for release of stored energy and OSHA Safety and Health Regulations for Construction 1926.555 Conveyors <https://www.osha.gov/>

### Conveyor Design and Safety Guidelines

A safety risk evaluation is required for all of our standard equipment. The safety risk evaluation considers every potential hazard on the conveyor, weighs the probability and the severity of the potential injury, and addresses methods of mitigation to make the risk of injury either low or negligible. We use the ANSI B11 TR3 standards for all of our risk evaluation.

In addition, all of our equipment is designed to comply with the following national and industry standards:

- **ANSI Z535.1** – Safety Color Code
- **ANSI Z244.1** – Lockout/Tagout of Energy Sources
- **ASME B15.1** – Safety standard for Mechanical Power Transmission Apparatus
- **ASME B20.1** – Safety standard for Conveyors and Related Equipment
- **CEMA** – Safety Standards and Labels
- **OSHA 1910.147** – The Control of Hazardous Energy
- **OSHA 1910.212** - General Requirements for all Machines
- **OSHA 1910.95** – Occupational Noise Exposure

#### Definitions:

- **ANSI** = American National Standard Institute
- **ASME** = American Society of Mechanical Engineers
- **CEMA** = Conveyor Equipment Manufacturers Association
- **OSHA** = Occupational Safety and Health Administration

## WARNING

- Safety: Always lock out power source and follow recommended safety procedures.

## 3.1: MHS Conveyor RECOMMENDED STANDARDS FOR CONVEYORS

### ANSI Standards for Conveyors

It is essential for safe and efficient system operation that safety information and guidelines presented here are properly understood and implemented.

MHS Conveyor recognizes American National Standard Institute (ANSI) booklet entitled [Safety Standards for Conveyors and Related Equipment B20.1](#). For more information go to: <http://webstore.ansi.org/default.aspx>

With any piece of industrial equipment, conditions exist that might cause injury to you or your co-workers. Because it is not possible to describe each potentially hazardous situation that might develop, you must be alert at all times for unsafe conditions. To avoid injury, use maximum possible care and common sense and adhere to all safety standards. Take special care while maintaining and inspecting electrical equipment and devices. All personnel working on or around the system should be aware of, and adhere to, all **CAUTION**, **DANGER**, and **WARNING** signs.

Labels or signs are posted to reduce the risk of injury to all personnel. Never assume that the signs and notices are applicable only to inexperienced personnel. Maintain signs in a legible condition. Contact your supervisor to post additional safety signs if you feel they are necessary.

<http://www.ansi.org/>

ANSI Conveyor Safety Rules

- Conveyor safety rules, as well as specific regulations and guidelines listed in this publication:
- DO NOT touch moving Conveyor parts.
- DO NOT walk, ride, or climb on the Conveyor.
- DO NOT operate the Conveyor with chain guards or other protective guards removed.
- Keep jewelry, clothing, hair, etc., away from the Conveyor.
- Know the location and function of all start/stop devices and keep those devices free from obstruction.
- Clear all personnel from the equipment before starting the Conveyor.
- DO NOT attempt to clear product jams while the Conveyor is running.
- Allow only trained and authorized personnel to maintain or repair Conveyor equipment.
- DO NOT load the Conveyor beyond specified design limits.
- DO NOT attempt to make repairs to the Conveyor while it is running.
- DO NOT modify equipment without checking with the manufacturer.
- DO NOT operate or perform maintenance on equipment when taking any type of drug, sedative, when under the influence of alcohol, or when over fatigued.
- Report any unsafe condition to your supervisor or maintenance staff.

### CEMA Standards for Conveyors

The Conveyor Equipment Manufacturers Association (CEMA) provides safety information related to conveyor systems. There are [Conveyor Safety Video](#) and [Conveyor Safety Poster](#) produced by CEMA.

MHS Conveyor recommends these videos for training and education purposes as part of a safe working environment around conveyor equipment. The videos introduce awareness of operations, personnel, maintenance technicians, and management to safety hazards commonly associated with the automated material handling conveyor equipment.

The safety posters reviews important safety labels and are intended to be posted in public places as a day-to-day reinforcement of good safety practices. These posters can be downloaded from the CEMA Website at <http://www.cemanet.org/safety-label-posters> or for more information for both the safety poster and the videos can be purchased from CEMA. Visit their website – [www.cemanet.org](http://www.cemanet.org)

For additional information or contact them at:

**CONVEYOR EQUIPMENT  
MANUFACTURERS ASSOCIATION**  
5672 Strand Ct., Suite 2  
Naples, Florida 34110  
239.514.3441

CEMA Safety Label Meanings

ANSI Z535.4 – Product Safety Signs and Labels

The word or words that designate a degree or level of hazard seriousness. The signal words for product safety signs are: DANGER, WARNING, and CAUTION.

**DANGER** –Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury. This signal word is to be limited to the most extreme situations.

**WARNING** – Indicates potentially hazardous situation which, if not avoided, could result in minor or moderate injury. It may also be used to alert against unsafe practices.

**CAUTION** – Indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury. It may also be used to alert against unsafe practices.

<http://www.cemanet.org/cema-safety-label-meanings/>

### **3.2: MHS Conveyor RECOMMENDS PROPER LABELS FOR CONVEYOR TYPES**

Shown below are some samples of labels applicable to conveyor standards.

	<h1>Package Conveyors</h1>	
Do Not Climb, Sit, Stand, Walk, Ride, Or Touch the Conveyor at Any Time	Do Not Perform Maintenance, Assembly, Disassembly, Electrical, Air, Hydraulic, and Gravity Energy Sources Have Been Locked Out and Blocked	Operate Equipment Only With All Appropriate Covers and Guards in Place
Do Not Load a Stopped Conveyor or Overload a Running Conveyor	Ensure That All Personnel Are Clear of Equipment Before Starting	Allow Only Authorized Personnel To Operate or Maintain Material Handling Equipment
Do Not Modify or Misuse Conveyor Controls	Keep Clothing, Body Parts and Hair Away from Conveyors	Remove Tools, Paperwork and Other Distracting Items When Power is Locked Out
Ensure That All Controls and Push Buttons are Visible and Accessible	Keep the Location and Function of All Stop and Start Controls	Report All Unsafe Conditions

**Product: Unit Handling**

**Equipment: Motor Driven Live Roller Conveyors**

To be placed along both sides of these conveyors since these conveyors provide support for personnel to stand, sit, or lay hazardous, for cleaning, sitting, walking, or resting.

To be placed along the sides of these conveyors to warn personnel that the conveyor can start automatically.

**A**

**DANGER**

Conveying, lifting, carrying, or supporting personnel on these conveyor systems is dangerous. Do not stand, sit, or lay on these conveyor systems.

**B**

**DANGER**

Conveying, lifting, carrying, or supporting personnel on these conveyor systems is dangerous. Do not stand, sit, or lay on these conveyor systems.

**C**

**WARNING**

Hazardous starts automatically when conveyor starts.

**D**

**WARNING**

Hazardous starts automatically when conveyor starts. Keep away.

SPACE UP TO A MAXIMUM OF 20 FT.  
CENTERS (BOTH SIDES)

Optional Label to be placed either on the side or top of rails when space available does not permit application of the larger label

**B**

**DANGER**

Conveying, lifting, carrying, or supporting personnel on these conveyor systems is dangerous. Do not stand, sit, or lay on these conveyor systems.

**D**

**WARNING**

Hazardous starts automatically when conveyor starts. Keep away.

SPACE UP TO A MAXIMUM OF 20 FT.  
CENTERS (Sides or top surface of both rails)

"B"/"D"

OPTIONAL

"A"/"B"  
"C"/"D"

20' FT. MAXIMUM

**NOTE:** Due to the design of these conveyors, there may not be room on the side rails to place the larger labels. In that case, the smaller labels may be used. Optionally, they may also be placed on the top surface of both rails. The key is the space available and visibility by operators and maintenance.

CEMA - August, 2010

UH-8

# CEMA Safety Label Placement Guidelines

### 3.3: WARNINGS AND SAFETY INSTRUCTIONS

Failure to follow the instructions and cautions throughout this manual and warning label on the conveyor may result in injury to personnel or damage to the equipment.

Your MHS Conveyor is powered by a motor and can be stopped only by turning off electrical power to the motor. As with all powered machinery, the drive-related components – including sprockets, chains, shafts, universal joints, and pneumatic devices – can be dangerous. We have installed or provided guards to prevent accidental contact with these parts, along with warning labels to identify the hazards.

Special attention must be paid to the following areas of this manual:

#### **WARNING**

- Indicates a potentially hazardous situation, which, if not avoided, could result in death or serious injury.

#### **CAUTION**

- Indicates a situation, which, if not avoided, could result in property damage.

### 3.3.1: Warnings and Safety Instructions

## WARNING

- After maintenance, REPLACE guards immediately.
- Keep ALL warning labels clean and clear of any obstructions.
- Never remove, deface, or paint over WARNING or CAUTION labels. Any damaged label will be replaced by MHS Conveyor at no cost by contacting Lifetime Services.
- It is very important to instruct personnel in proper conveyor use including the location and function of all controls.
- Special emphasis must be given to emergency stop procedures.
- It is important to establish work procedures and access areas, which do not require any part of a person to be under the conveyor.
- It should be required that long hair is covered by caps or hairnets.
- Loose clothing, long hair, and jewelry must be kept away from moving equipment.
- Maintain enough clearance on each side of all conveyor units for safe adjustment and maintenance of all components.
- Provide crossovers or gates at sufficient intervals where needed to eliminate the temptation for personnel to climb over or under any conveyor.
- Walking or riding on a moving conveyor must be prohibited.
- Before performing maintenance on the conveyor, make sure the start-up controls are locked out and cannot be turned on by any person other than the one performing the maintenance.
- If more than, one crewmember is working on the conveyor, EACH CREW MEMBER MUST HAVE A LOCK ON THE POWER LOCKOUT.
- All pneumatic devices must be de-energized and air removed to prevent accidental cycling of the device while performing general maintenance.
- Make sure all personnel are clear of all conveyor equipment before restarting the system.
- Before restarting a conveyor which has been stopped because of an emergency, an inspection of the conveyor must be made and the cause of the stoppage determined. The starting device must be locked out before any attempt is made to correct the cause of stoppage.

## ⚠ WARNING

- Before servicing or performing any work in the motor control panel, disconnect and lock out air and the main incoming service. If only the panel disconnect is off, the incoming side will still be hot.

## 3.4: MHS Conveyor CONTROLS SAFETY GUIDELINES

The following basic conveyor control safety guidelines are recommended by MHS Conveyor even though Business Partner may or may not purchase conveyor controls from MHS Conveyor. The items listed deal with applications of controls equipment. **The actual installation of the equipment must always follow the National Electric Code and all other local codes.**

### Start-up Warning Horn

Ideally, all conveyors should be within sight of the conveyor start pushbutton. This allows the operator to verify that no one is touching the conveyor or would be in danger if the conveyor were to start up.

If it is not possible to see the entire conveyor being started from the start pushbutton location, then some form of audible warning device is required. It could be a horn, buzzer, bell, or anything unique to that conveyor for that location. It should be loud enough to be heard at any point on the conveyor system. It should sound for approximately five seconds after the start pushbutton is pushed, prior to the actual running of conveyor. Any auxiliary equipment such as vertical lifts, turntables, etc., should also be included in the warning circuitry.

Conveyors that stop and restart under automatic control could also require a horn warning prior to restarting. If it is not easy to distinguish the difference between a fully stopped conveyor system and a momentarily stopped conveyor section, then it is advisable to add a warning horn. All conveyor sections that stop and restart automatically should be marked with appropriate signs or labels.

### Start Pushbuttons

Start pushbuttons should be the flush type or guarded such that inadvertently leaning against them will not actuate the conveyor. They should be provided with a legend plate clearly defining which conveyors will be started.

### Stop Pushbuttons

Stop pushbuttons should be the extended type such that any contact with it is sufficient to stop the conveyor. They would also be provided with a legend plate clearly defining which conveyors will be stopped.

### Operator Controls

Additional operator controls should be designed into the system with the same guidelines that go into start and stop pushbuttons, depending upon their function. Devices which are repeated on multiple control stations, such as emergency stops, should be located at the same relative location on each station (such as lower right corner).

### Emergency Stops

All locations where an operator must work directly at the conveyor should be protected by an emergency stop. An operator should not have to move from where he is to actuate the emergency stop.

Conveyors in areas of high pedestrian traffic should also be protected by emergency stop devices.

For all other instances, emergency stops should be located throughout a system such that it is possible to shut down the system without having to walk too far. In these instances the emergency stop is used more to protect the equipment from damage than to protect personnel.

Emergency stops can be of the pushbutton or cable operated switch type. The pushbutton type should be a red, mushroom head maintained pushbutton which requires resetting after it is actuated. Cable operated switches should trip by pulling the cable, and require resetting at the switch.

Actuating an emergency stop must drop-out the start circuit, requiring restarting the system using the start pushbuttons provided.

An emergency stop should normally stop all conveyors in the system. Very large systems may involve dividing a system into zones of control based on proximity of personnel, safety hazards, walls obstacles, etc.

### Controls Logic

Solid state controls logic devices, such as programmable controllers are used extensively for conveyor control. They are very reliable, but a hardware failure or software bug would cause an output to function erratically. For this reason, start circuits, warning horn circuits, and emergency stops should usually be configured using conventional relay logic.

### Safety Switches

All conveyor control cabinets and motors should be provided with safety (or disconnect) switches. These switches must have provisions for padlocking. As required for maintenance, equipment should be locked in the off position.

### Special Devices

Special devices and equipment such as vertical lifts, turntables, high speed conveyors, etc., all have unique design and safety requirements. These should be looked at in each case to determine what the requirements might be.

Rev 08/22/2011

## Chapter 4: INTELLIROL INTRODUCTION

### 4.1: CONCEPT

Utilizing 24V DC motorized roller, this technology is the most revolutionary since the advent of the line-shaft conveyor in the late-'60s. Its impact is currently expanding rapidly as more users and manufacturers begin to see the benefits of this technology. MHS Conveyor's experience with IntelliROL goes back to 1996 with a major tire handling system. This fast advancing technology uses a self-contained 24-volt DC motorized roller to power a segment or zone of the conveyor. Rollers adjoining the motorized roller are slave-driven with the same components MHS Conveyor developed in the '60s.

XenoROL® line-shaft driven live rollers and IntelliROL equipment both drive product through the developed tangential force at the conveyor roller surface. The relationship between tangential forces, product weight and product characteristics have been at the root of MHS Conveyor technology for the past 30 years. This natural extension places MHS Conveyor at the forefront of applying this technology.

#### Operation

The product-carrying rollers are slave-driven by a series of pre-tensioned belts to the motorized roller in each zone. Since every motorized roller can be individually controlled, every segment of the system can become a zero-pressure zone.

Accumulation begins when an external signal "arms" the first sensor (discharge end). External signals may originate from electrical controls, sensing devices, manually activated switches, etc. The first product stops at the discharge sensor, which arms the sensor in the upstream zone. A product travels through a zone, until blocking, the sensor (Armed from the previous zone) all carrier rollers within the zone stop. As accumulation takes place from zone-to-zone, accumulated products do not touch each other as long as the product is shorter than the zone length.

#### Feature/Benefits

- Flexible Modular design / easy to reconfigure
- Run on demand / less noise, wear, and energy consumption
- Non-contact zero-pressure / product protection
- Compact low profile / multi-level usage
- Reversible / less electrical hardware cost
- No scheduled maintenance / lower operating cost
- Low voltage / safety and lower cost
- Simple installation / lower cost
- Soft start/stop / low G-forces
- Variable speed / versatility to suit each requirement
- Intelligent control capabilities / cost no greater than need

Most IntelliROL modules have a maximum depth profile of 6-3/8" top of roller (TOR) to bottom of flange. Devices such as UBT, Wheel Diverters, etc... Require a deeper channel profile. A bi-directional urethane belt transfer has a maximum rate of 30 cases per minute.

## CAUTION

- Urethane belt transfer belts should only run while transferring a load. (Run on Demand)

All curves except the minimum radius curve are based on MHS Conveyor' true taper roller for all widths.

IntelliROL optional run-on-demand software can selectively deactivate conveyor zones when not carrying product. Because each IntelliROL module has its own drive and control, any level of control sophistication is possible, including product tracking, diagnostics, and data collection.

The technology behind IntelliROL is growing and changing quickly. Most applications use a 24-volt DC, 1.9" diameter, brushless motorized roller, and these rollers are the basis of design for most IntelliROL modules. Special applications requiring slow speeds and high torque may require the use of geared motorized rollers and 3-phase AC voltage motorized rollers have been used in heavy-duty applications.

## 4.2: INTELLIROL APPLICATION OPTIONS

The application of IntelliROL breaks down into two areas. One is complete systems; the other is the application of specific modules within a system that may be based on line-shaft or some other conveyor technology.

MHS Conveyor has standard designs for straight bed sections for transportation or zoned accumulation. Standard zone lengths are 24" or 30". MHS Conveyor also offers curves in 30°, 45°, 60° and 90°, 30° or 45° spurs, UBT transfers, three designs of product stops, belted inclines and declines, gates, minimum radius curve, and anti-rollback brakes (inclining). Many options are available including different roller centers, bearings, roller coatings, etc.

Application Specific Modules may be used to solve certain requirements within a system at a most cost-effective manner using IntelliROL conveyor.

Application Specific Module examples include:

- Short spurs
- Workstations
- Fill gaps between conveyors or devices
- Providing power to a lift bed
- Transfer car
- The bed of a turntable
- Gates
- Low Profile requirements over aisles, multi-level, etc.

In nearly all the above examples, space is a major consideration. Weight and balance may even be a consideration on something like a scale, lift, or vertical conveyor.

## 4.3: DEFINITION OF TERMS

**Accumulation** - Act of queuing, holding, or backing up of product on a conveyor.

**Carrying Roller** - The conveyor roller upon which the object being transported is supported. It has circumferential grooves near one end to allow the slave belts to ride below the carrying surface.

**Coefficient of Friction** - A numerical expression of the ratio between the force of contact between two surfaces and the resistant force tending to oppose the motion of one with respect to the other.

**Conveyor Width** - The dimension outside to outside of frame rails. For the inside dimension, the abbreviation "BF" (between frames) is used.

**Crossmember** - Structural member, which is assembled between two sides, channels of a conveyor bed.

**Frame** - The structure, which supports the components of a conveyor bed consisting of formed channel rails, bolted together with crossmembers.

**Indexing Control** - Maintains non-contact accumulation and functionality of gates, transfers, curves, etc. by not allowing accumulation in these areas.

**IntelliROL Non-Contact Accumulation** - "Pure" zero-pressure accumulation which guarantees that one product will not touch any other during accumulation, release, or any time. (Requires product to be inducted singularly and be 3" to 4-1/2" shorter than zone).

**Roller Centers** - Distance between centerlines of adjacent rollers. For curves, roller centers are measured at the inside radius.

**Roller Groove** - The groove that is fabricated into the carrying roller to provide a seat for the slave belt below the carrying surface.

**Singulation Release** - A method of individual zone release that spaces product approximately one zone length apart.

**Slave Belt** - An endless round belt manufactured from elastic material, typically urethane, connecting a motorized roller, or carrying rollers or other carrying rollers within a zone.

**Slug Release** - Simultaneous release of several products.

**Tapered Roller** - A conical conveyor roller for use in a curve with end and intermediate diameters proportional to their radius.

**Zone** - A portion of conveyor activated by a motorized roller that may be controlled by a photoeye.

**Zone Length** - The distance between sensing devices (typically containing one motorized roller).

**Zero-Pressure Accumulation** - The lack of force between products after accumulation. (Industry standard)

## 4.4: PRODUCT DESCRIPTION EXAMPLES

### PRODUCT DESCRIPTION EXAMPLES

INTELLIROL ITR Transportation Bed											
Type	Model	Width	ITR DriverCard	Frame	Roller Centers	Roller Groups	Flow Direction	Length	Roller Type	Number of Motorized Rollers	
BED	ITR-22BF-CB-C6-3RC-30RG-RH	22BF	CB	C6	3RC	30RG	RH	10'0"	FE60	4MR

## Chapter 5: INTELLIROL RECEIVING & SITE PREPARATION

### General

MHS Conveyor IntelliROL units are shipped in subassemblies. These subassemblies are packaged to guard against damage in shipment, when handled properly.

Examination immediately following unloading will show if any damage was caused during shipment. If damage is evident, claims for recovery of expenses to repair damage or replace components must be made against the carrier immediately. While unloading, a check must be made against the Bill of Lading, or other packing lists provided, to confirm full receipt of listed items.

### CAUTION

- **TAKE CARE DURING THE REMOVAL OF EQUIPMENT FROM THE CARRIER.** Remove small items and boxes first. Pull and lift only on the skid, not on the frame, cross member or any part of the equipment.

### Preparation of Site

After the conveyor is received, move it to the installation site or designated dry storage area as soon as possible. Clean up all packing material immediately before parts get lost in it. Loose parts should remain in the shipping boxes until needed.

Prior to starting assembly of the conveyor, carefully check the installation path to be sure there are no obstructions that will cause interference. Check for access along the path needed to bring in bed sections and components closest to the point where they are needed. It is often necessary to give the area along the system path a general cleanup to improve installation efficiency, access, and accuracy.

## 5.1: PARTS INVENTORY & IDENTIFICATION

Each subassembly is shipped completely assembled. Identify and separate components by type or tag number, for inventory and ease of locating during installation.

An identification label is attached to the outside of one side channel or on a cross member, close to one end of each conveyor bed.

**This label contains:**

- Item number
- Description
- Job Number
- Mfg. Number
- Date of manufacture
- Tag number (if specified)
- Assembler's clock number
- QR (Quick Response) Label
  - Scan Code For IOM Manual

Scan the QR code to retrieve the IOM Manual, if nothing happens; check your scanner settings and make sure the QR Label setting is enabled.

On the supports, the tag is located on the bottom side of the foot. On special devices, it is located on a convenient flat surface that is not offensive to the appearance of the equipment but is still accessible for viewing. These numbers can be cross-referenced against the packing list. Loose parts are boxed and shipped separately.

You should have all conveyor sections and supports for a particular conveyor prior to installation. It is cost-effective to identify and procure any missing parts before they are needed for assembly. Small items like nuts and bolts are weigh-counted and packaged by size and type.

 <b>WARNING</b>	
	<ul style="list-style-type: none"> <li>• The Installation Supervisor must be experienced with conveyor, qualified in the mechanics of the equipment, and enforce safe working procedures for the protection of the crew, customer, and customer's property.</li> </ul>

 <b>WARNING</b>	
	<ul style="list-style-type: none"> <li>• Before restarting a conveyor which has been stopped because of an emergency, an inspection of the conveyor must be made and the cause of the stoppage determined. The starting device must be locked out before any attempt is made to correct the cause of stoppage.</li> </ul>

# Chapter 6: INTELLIROL INSTALLATION

---

## General

IntelliROL conveyors are offered in four standard widths of 16BF, 22BF, 28BF, and 34BF with the overall conveyor width being 3.25" plus the BF. Standard available bed lengths are multiples of the two standard zone lengths of 24" and 30", up to 10' (both) or 12' (24" zones only). Standard roller center distance is 3". Other roller centers and widths may be available.

## Driver Cards

The driver cards that are supplied with each motorized roller are mounted inside the side channel of a bed, opposite the slave O-ring side of the conveyor. These driver cards condition the 24VDC power coming from a separate power supply. Standard IntelliROL beds are prewired and tested prior to shipping. MHS Conveyor provides an optional plastic shroud that snaps into grooves in the 7.5" deep CRUZchannel to cover the driver cards and wiring. These shrouds are translucent to allow monitoring of the LED condition lights on the driver cards.

## Drive / Slave Belt Break-in

The roller-to-roller round drive belts is installed under tension with predetermined initial tension. After a time of static and running time, this initial tension drops to a running tension.

Run all IntelliROL transportation conveyors 48 hours empty before running product. This will ensure motorized rollers are not overloaded under the higher initial belt tension. This run time is best accomplished during installation as soon as the power supplies are wired and during the commissioning phase.

## Commissioning of Equipment

Commissioning of the equipment can best be defined as the final adjustments and test of the installed equipment required for its proper operation. The need for commissioning is inherent, since the individual components of equipment are brought together at the installation site to operate as a system.

Mechanical and electrical commissioning is most often carried out simultaneously. Commissioning must simulate the actual operation of the system as close as possible to demonstrate its ability to perform reliably at the specified rate in the prescribed operational sequence.

During the Commissioning Phase, it is necessary to load the equipment with product to be conveyed, which provides the means of detecting those areas requiring adjustment. Personnel will be required to support operational functions and may serve as part of operator training and familiarity with the system. During the commissioning activity, special attention should be directed toward personnel safety.

**No unnecessary risks should be taken** that would endanger the safety of any commissioning personnel. All personnel must familiarize themselves with all safety features of the system such as emergency stops and power supply disconnects.

After commissioning, conduct operator training on all safety and operational aspects of the system. This must include systems start-up, location of emergency stops and familiarity with all operator controls.

## Precautions

**ULTRAVIOLET RAYS** of sunlight will weaken polyurethane slave belts.

**OILY OR WET CONDITIONS** impair frictional drive characteristics between polyurethane slave belts and roller grooves. **CORROSIVE SUBSTANCES**, such as concrete curing agents will adversely affect various components, voiding the warranty.

## 6.1: SUPPORTS & CONNECTIONS

Roll Formed (RF) supports replace all existing MHS Conveyor floor supports.

For details on Supports & Connections see Support & Connections IOM (#1200485) at <https://mhs-conveyor.com/support/iom-manuals/supports-and-connections>

## 6.2: GAP FILLER BED

### Application

- The application of Gap Filler Beds is for transportation conveyor.
- When using a Gap Filler Bed between two transportation conveyors, use a roller spacing the same as the beds adjacent to the filler bed.

### Features/Benefits

Gap Filler Beds aid the modularity of conveyors. Filler beds fit between straight sections of transportation to add length to the conveyor layout. The following is a list features and their benefit.

- Modular design - Easy to reconfigure
- C6 and Cruz channel beds available in both 2" and 3" roller spacing
- No scheduled maintenance - Lower operating cost
- Simple installation - Lower cost
- Few moving parts -Reduced maintenance cost and less noise

## 6.3: ENVIRONMENT

### Temperature range (ambient):

+35° to +100°F. For applications that exceed this temperature range, please consult Applications Engineering.

### Ultraviolet Rays:

Avoid exposure of polyurethane O-rings to sunlight.

### Oily or Wet Conditions:

Will impair frictional drive characteristics.

### Corrosive or Abrasive Substances:

Will adversely affect various components.

### Cleaning O-Rings

Manufacturer suggested for cleaning O-rings is to use a cloth with a de-natured alcohol when cleaning the O-ring. This cleaning product would also work for cleaning the rollers.

### Note:

Do NOT immerse the O-rings or any component in a container of this cleaning product.

Accumulation with Application Engineering approval.

## 6.4: DIMENSIONAL REFERENCE POINTS

The path of each conveyor in the system is determined by establishing a reference point at each end. The centerline of the conveyor is established and a chalk line is snapped between these points.

Conveyors should be installed with the centerline of the bed matching the centerline of the conveyor path within 1/8" of true center. Locate and mark the center of the crossmembers at each end of the conveyor. Use a plumb line or other acceptable means to ensure accuracy to the chalk line.

Always carry out a thorough check for any obstructions such as building columns, manholes, etc. It may be necessary to reroute the conveyor to avoid the obstruction. In this case it would be advisable to begin installation at this point, using the obstruction as a reference point (Datum), and install the sections in either direction as required.

All conveyor sections must be checked for squareness prior to installation as "racking" or being knocked out of square may have occurred during shipping and handling.

## 6.5: INTELLIROL INSTALLATION

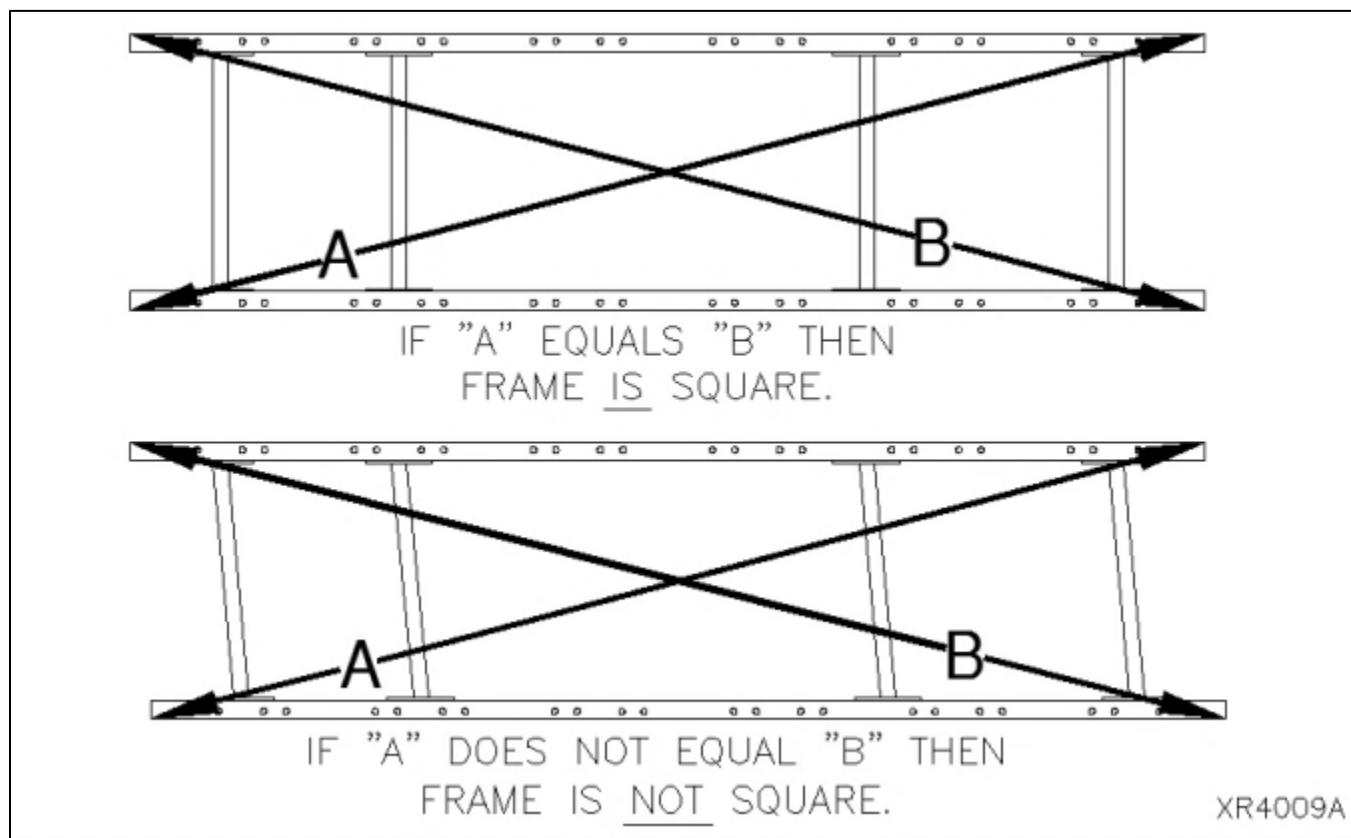

### Basics IntelliROL Installation

IntelliROL conveyor may be installed using any of the supporting arrangements described under Support & Connections chapter of this manual. As each bed is installed in the system, level the conveyor from side to side using a bubble level on the roller at each support. The bubble location should be within the level indicator lines of the level. The centerline of the conveyor should not bow to the right or left more than 1/8" in either direction from a centerline drawn between the centers of the conveyor end assemblies.

A simple way to check this is to tie a nylon string around the center of the end roller, pull it taut, and tie it to the center of the roller at the opposite end. Put a wood spacer under the string at each end so it does not rest on the rollers. With the taut string centered on each end and suspended above the rollers, check the center of the rollers at each support relative to the string and adjust accordingly. (Note that this must be done after side-to-side leveling of the conveyor at each support.)

When joining bed frames it is important to align the side channels. Care must be taken to make sure the rollers are level (carrying surfaces) from bed to bed.

All bed frames should be checked for squareness. To check, measure diagonally from corner to corner. Measure the opposite corners in the same manner. If the bed is square, the two measurements will be the same within 1/16".

## 6.6: ELEVATIONS

All conveyors should be installed in accordance with the elevations shown on the drawings. In addition, all conveyors must be level across the frame width and length (if horizontal). Leveling of the frames is best done using a rotating laser level or a builder's level.

After the first elevation is established at a critical point, the elevation of all other points shall be relative to this first point. Normal practice is to dimension the layout and measure elevations from the floor at each point of support.

As the conveyor system proceeds onto another floor or into another building or room, a new elevation will be measured from the floor at that point. This new elevation will then become the reference for subsequent elevations.

When installing an overhead system, the first elevation is measured from the floor and becomes the reference elevation point until a change in elevation is shown on the layout. Any new elevation is also measured from the floor and becomes the new reference point. The process is repeated each time an elevation change occurs.

### CAUTION

- Consult the building architect or a structural engineer regarding ceiling loading or structural limitations of the building if any conveyor section is ceiling hung.

### Component Orientation

Using your conveyor system layout drawing and the numbers on the I.D. tags on each component, position and align the conveyor sections, you must know:

- The direction of product flow
- The elevation height
- Charge and discharge end beds

### IMPORTANT!

Do not make alterations to the equipment without consulting with user's representative and MHS Conveyor.

~~Modifications~~ to the equipment may impair its function, create a hazardous condition, affect its useful life, and/or void the warranty.

### Establishing Conveyor Flow

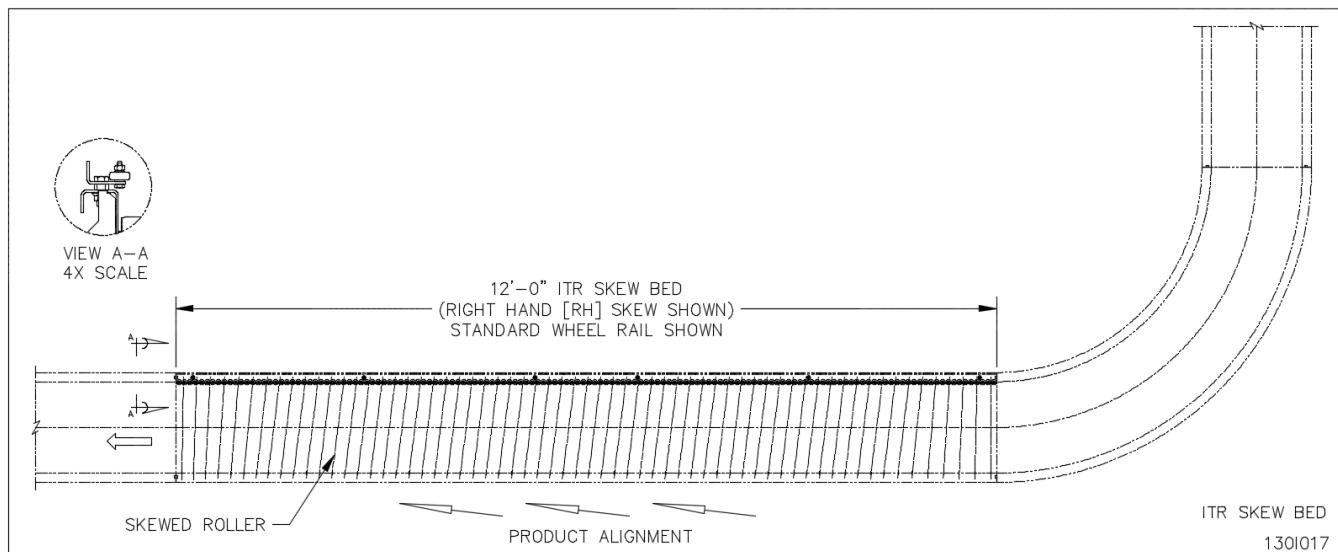

Standard IntelliROL beds are supplied as either RH or LH flow. Looking across from the side of the IntelliROL bed the O-rings away from you and the product conveying to the right, the bed is considered a right hand (RH) flow bed. Using the same position as noted above and with the product conveying to the left, the bed is considered a left hand (LH) flow bed. The identification label described under [Parts Inventory & Identification](#) has all of the information required to identify the piece of equipment.

## Chapter 7: ITR SKEWING BED ROLLERS

Skewing rollers is recommended on ITR conveyor if the between frame (BF) dimension of your conveyor is double the width of the smallest product. The normal method of skewing is to install a factory skew bed at the charge end of your conveyor. If your conveyor line is over 100' long and you have small product on it, you may want to add a shorter maintenance skew bed midway down the conveyor to preserve the product alignment.

### 7.1: FACTORY SKEW SECTION

Standard 12', 10', or 5' skew beds are available with factory skewed rollers at 7 degrees. These beds are available in left or right hand and a factory installed wheel guard rail is standard. The skewed bed will move products across the conveyor approximately 16" over the 12' length. This side movement is dependent on the bottom condition of the product.

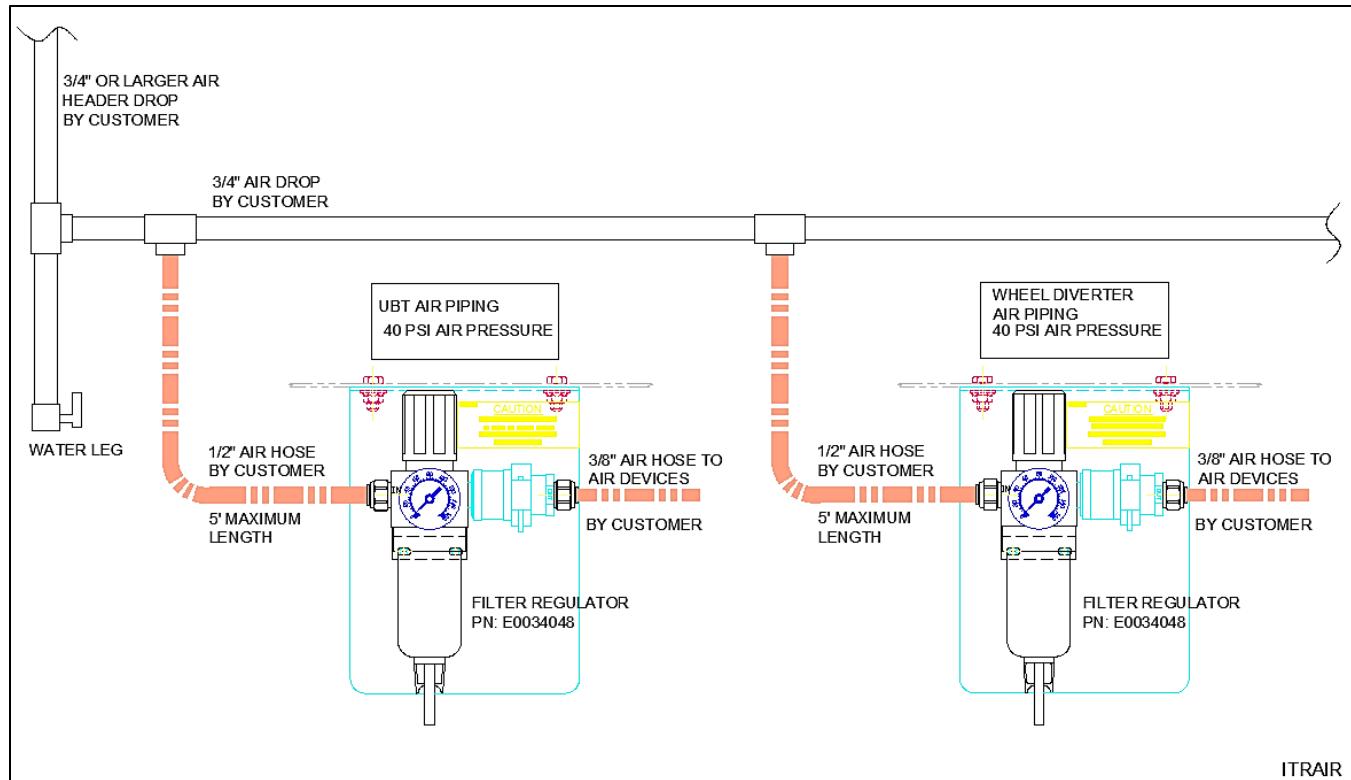

### 7.2: SKEW BED INSTALLATION

MHS Conveyor dedicated skew beds are typically installed as the first bed section in an ITR conveyor line starting from the charge end. The rollers are factory skewed to the requested side and the installation is the same as any other ITR transportation bed section.

A wheeled guard rail is standard to prevent the stalling of product as it is forced against the side channel by the skewed rollers. The wheeled rail is shipped installed at our factory.

## Chapter 8: INTELLIROL AIR SUPPLY REQUIREMENTS

### General

Every conveyor system is unique, with its own specific requirements. Therefore, the following is a general guide.

### Main Feeder

Air velocity through the main feeder piping can be kept smooth with lower losses using large diameter pipe with minimum bends and restrictions. Standard weight black pipe or copper is suitable for plumbing the compressed air overhead to all points of use.

### Air Drops

MHS Conveyor recommends using 3/4" pipe on air drops for low pressure loss. The drop is terminated with a drain at the bottom. A tee located prior to the drain (drop leg) branches off to the conveyor. This branch line must contain a lockout/shutoff. A shutoff must also be located in the drop before the branch tee.

OSHA Rule 29, CFR1910.147 <https://www.osha.gov/> requires energy sources (air drops) be turned off and capable of being locked or labeled with a warning tag.

### IMPORTANT!

If your air compressor uses synthetic oil, a coalescing filter plus a regular filter of 5 micron is required. Synthetic oils will shrink the seals in pneumatic devices.

### Low Pressure Switch

An air pressure switch is recommended to be installed into the pneumatic circuit to detect a drop in air pressure below required levels. If pressure drops below approximately 20 PSI, the conveyor system should shut off.

## Pneumatic Requirements

- Regulator pressure set at 40-45 PSI with pop-off set to 35 PSI.
- Maximum conveyor length each way from regulator is 100'.
  - Locate regulator in center of conveyor for maximum efficiency.
- Low pressure switch to be set at 20 PSI.
- In high humidity or low temperature, use air dryer.
- Use 5 micron filter.
- Lockout/shutoff valve to be provided by air system installer.

# Chapter 9: INTELLIROL POWER SUPPLY STANDARDS

## 9.1: ITR POWER SUPPLY STANDARD

The IntelliROL product line includes power supplies that convert various AC power sources to 24VDC power sources. These power supplies are used to supply power to the motorized roller components included in our IntelliROL product line. Power supplies are available for most standard input voltages. Available output currents include 10, 20, 40, and 80 amperes. IntelliROL power supplies are available with internal branch circuit protection. If branch circuit protection is already provided upstream by others, IntelliROL power supplies are available without internal branch circuit protection at a lower cost. All IntelliROL power supplies are designed and built to UL508A standards.

*Standard IntelliROL Power Supply with Puls power supply*

The 40 amp power supply has (2) 20 amp circuits and the 80 amp power supply has (4) 20 amp circuits. Each 20 amp circuit will support up to 9 motorized rollers. These supplies require either 120 or 240 VAC single-phase or 480 VAC three-phase (480 VAC 10A requires two-phase), and the DC power side is wired to the motorized rollers.

Wiring for the 24 VDC power along the length of the conveyor is provided by MHS Conveyor. See Replacement Parts in this chapter for other parts and cables for IntelliROL. All power supplies are offered with or without branch circuit protection. All power supplies except 80 amps include a 10.5' power harness

(1102286) to connect to bed 24VDC power harness. All standard 80 amp power supplies include 33' power harness (1138166) to connect to bed 24VDC power harness. All power supplies also include a common ground (1161502) and splice connector kit (1207178).

### For more ITR Power Supply Application Control Guidelines:

<https://mhs-conveyor.com/support/application-control-guidelines>

#### Note:

With Branch Circuit Protection on the supply side, fuses are included with power supply. Without Branch Circuit Protection, fuses are not included with power supply. Fuses on the DC output side are included.

Standard 24VDC power supplies are used for IntelliROL conveyor only. Standard power supplies can be powered from a separate power source input or tapped into a high voltage motor to a corresponding conveyor that the IntelliROL conveyor will directly interface with. Use only with motors without VFD.

## 9.2: ITR AND CRUZCONTROL POWER SUPPLY COMBINATION

Combination 24VDC power supplies are used with IntelliROL and conveyor with CRUZcontrol. The power supplies have two 24VDC circuits, Class I for the IntelliROL and Class II for the CRUZcontrol. Combination power supplies can be powered from a separate power source input or tapped into a high voltage motor to a corresponding conveyor that the IntelliROL conveyor will directly interface with. Use only with motors without VFD.

24VDC COMBINATION POWER SUPPLIES WITHOUT BRANCH CIRCUIT PROTECTION FOR INTELLIROL AND CRUZCONTROL

## 9.3: ITR POWER SUPPLY MOTOR CONTROL

The Motor Control 24VDC power supply is used with a 480 VAC motor. The Motor Control power supply is powered from the same power source as the high voltage motor that IntelliROL will directly interface with. Use only with motors without VFD.

MOTOR CONTROL 24VDC POWER SUPPLIES FOR INTELLIROL (USED ONLY WITH MOTORS W/O VFD)

## 9.4: GENERAL ELECTRICAL REQUIREMENTS

### **WARNING**

- All electrical controls must be installed, wired, and connected by a licensed electrician only.
- All motor controls and wiring must conform to the National Electrical Code as published by the National Fire Protection Association and approved by the American National Standards Institute, Inc. Since specific electrical codes vary from one area to another, be sure to check with proper authorities before starting.

The electrical voltage of motorized rollers will be stamped on a metal name plate affixed to one end of the roller. This voltage should be checked to see that it matches the output voltage of your power supply. Consult the appropriate MHS Conveyor wiring diagram for the proper connections. If a single speed three phase motorized roller runs the wrong direction, two leads must be switched to reverse rotation.

### **WARNING**

- Do not connect the driver card to any other voltage than the one listed on its name plate.

**NOTE:**

All controls equipment is covered by the original manufacturer's equipment warranty.

<b>⚠ WARNING</b>	
	<ul style="list-style-type: none"><li>• All safety devices, including wiring of electrical safety devices, shall be arranged to operate in a "fail safe" manner. That is, if power failure or failure of the device itself would occur, a hazardous condition must not result.</li></ul>

<b>⚠ WARNING</b>	
	<ul style="list-style-type: none"><li>• Before restarting a conveyor which has been stopped because of an emergency, an inspection of the conveyor must be made and the cause of the stoppage determined. The starting device must be locked out before any attempt is made to correct the cause of stoppage.</li></ul>

# Chapter 10: INTELLIROL DRIVERCARDS GUIDELINES

---

## 10.1: ITR APPLICATION STANDARD

The ITR product line is based on the following features and concepts: <http://itohdenki.com/>

- Itoh Denki motorized rollers and drivercards (CBM-105, HB-510 or IB-E03) are standard.
- Cables are pre-engineered with the appropriate connectors.
- All channels are designed to accommodate any of the electrical variations.
- All CRUZchannels including C6 channels have welded connectors and CRUZbelt tube crossmembers.
- AutoCAD blocks for ITR devices are available upon request.

## 10.2: ITR<sub>CB</sub> – CBM-105 (TRANSPORTATION)

- Standard product offered in Core Technologies.
- Transportation conveyor based on the Itoh CBM-105 drivercard and FE-60 motorized roller.
- Each drivercard is wired to power, but requires a 24VDC run signal (provided by others) to run each card. Beds include a run harness distributing that signal to each card.
- C6 channel with welded butt bolt bed connectors.
- 30" roller groups with 3" centers are standard.

## 10.3: ITR<sub>HB</sub> – HB-510 (ACCUMULATION)

- Standard product offered in Core Technologies.
- ZPA conveyor based on the Itoh HB-510 drivercard and FE-60 motorized roller.
- Can be a standalone conveyor. It may not require an input from a control panel depending on application.
- CRUZ channel with welded butt bolt bed connectors and integrated photoeyes.
- 24" and 30" zones with 3" centers are standard.
- A start signal can be used to activate the conveyor when using run on demand.

## 10.4: ITR<sub>IB</sub> – IB-E03 (PROGRAMMABLE)

- Standard product offered in Core Technologies.
- Conveyor based on the Itoh IB-E03 drivercard and FE-60 motorized roller.
- Programmable drivercard (Programming by customer).
- CRUZchannel with welded butt bolt bed connectors and integrated photoeyes.
- Accumulation or transportation depending on customer needs.
- A signal can be sent from central PLC to activate the conveyor through the cards LAN line or the card can activate the conveyor with internal programming logic using the cards inputs.

## 10.5: ITR BED CONSTRUCTION

- Straight bed, curve, & spur channels – CZ or C6.
- C6 channel standard has 1.625" flanges.
- C6 channel top flange are punched at ends for transition bezel (1120166) from C6 to CRUZchannel.
- All channels come with a welded bed connector.
- Straight bed crossmembers are tube style as used in the CRUZbelt product line.
- Straight beds will be punched for drivercards in every zone.

## 10.6: ITR SKEW BED CONSTRUCTION

- Straight bed – CRUZchannel.
- CZ channel standard has 1.625" flanges.
- 2.25"RC installed at the factory.
- Transportation conveyor based on the Itoh CBM-105 cards and FE-60 motorized roller.
- All channels come with a welded bed connector.

## 10.7: CURVE CONSTRUCTION

- 36" standard inside curve radius with CRUZ® side channel.
- Curve channels are notched with welded 10ga backers.
- No straight tangents, full straight section arc only.
- All channels come with a welded bed connector.
- CBM-105, HB-510, and / or IB-E03 cards located on the outer channel with an adapter plate (CBM-105 Plate: E0006531, HB-510 Plate: E0006532, IB-E03 Plate: 1165192).
- Sensor location is 6" from the end of the zone.

## 10.8: UBT PNEUMATIC CONSTRUCTION

- 3'-4" OAL standard for 6 strand, 3'0" standard for 5 strand.
- C6 channels are 10ga construction with welded butt bolt bed connectors.
- UBT transfers use 1.9" diameter carrier rollers.
- UBT transfer belts on 4" center standard.
- UBT's with sensors, PE's (ZL) & reflectors are available as a standard option.
- UBT's are universal LH/RH. The power harness is installed for LH flow, but can be reversed by moving a female gender adapter to the other end of the harness.

## 10.9: UBT ELECTRIC CONSTRUCTION

- 3'-4" OAL standard for 6 strand, 3'0" standard for 5 strand.
- C6 channels are 10ga construction with welded butt bolt bed connectors.
- UBT transfers require 1.9" diameter carrier rollers.
- UBT transfer belts on 4" center standard.
- UBT's with sensors, PE's (ZL) & reflectors are available as a standard option.
- UBT's are universal LH/RH. The power harness is installed for LH flow, but can be repowered by moving a female gender adapter to the other end of the harness.
- ITR<sub>IBE</sub> is the only version of a standard electric lift UBT (transportation only).
- (2) 24VDC Lifting Gearmotors standard.

## 10.10: POWER MERGE CONSTRUCTION

- Standard power merge is available in ITRCB or IB-E version (Transportation only).
- Standard spur angles are 30 & 45 degree, RH/LH.
- Spur BF is 6" wider than abutting bed.
- PE's by others.

## 10.11: WHEEL DIVERT PNEUMATIC CONSTRUCTION

- Standard wheel diverter available in ITRCB or IB-E version (Transportation only).
- Standard spur angle is 30 degree RH/LH beds.

- Diverter has 4 independently acting rows. Each divert wheel row is controlled by a separate solenoid. Having separate solenoids allows for independent control to raise or lower each wheel row independently allowing increased throughput.
- Solenoids are included as standard. 120VAC or 24VDC available.
- PE's by others.
- Wheel diverts include drop out tubs. Maintain at least 10" clearance below divert for removal.

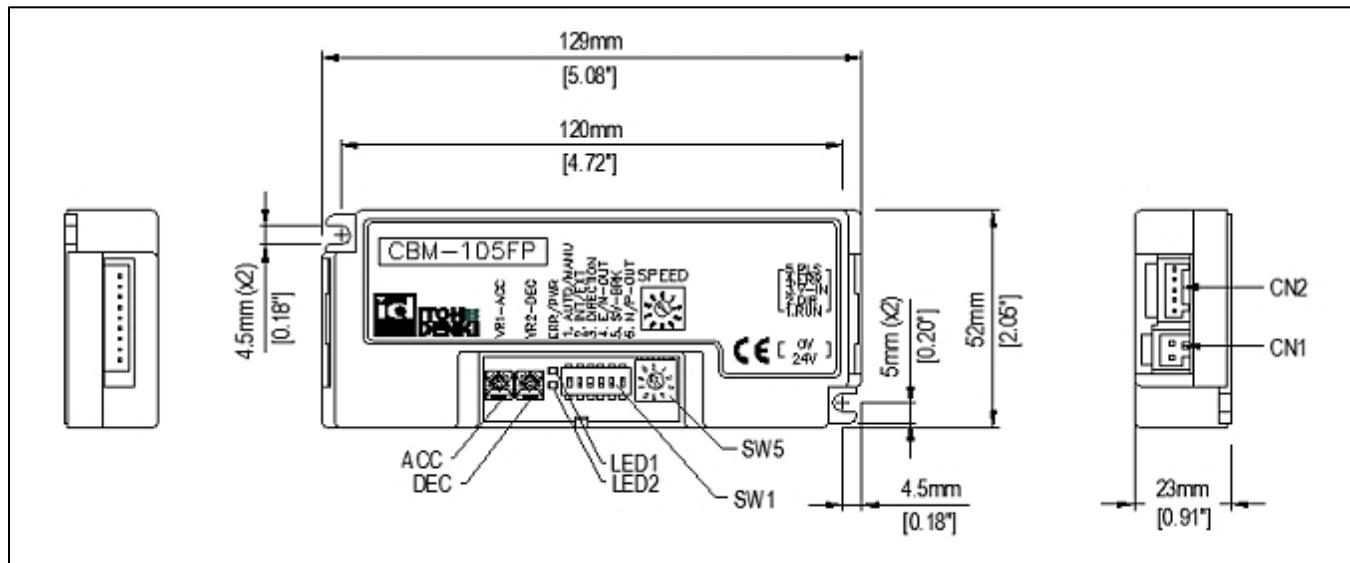

## 10.12: WHEEL DIVERT ELECTRIC CONSTRUCTION

- ITR<sub>IBE</sub> is the only version of a standard electric lift wheel diverter (transportation only).
- Standard spur angle is 30 degree RH/LH beds.
- Diverter has 4 acting rows. (2) Divert wheel rows are controlled by separate 24VDC Gearmotors.
- (2) 24VDC Lifting Gearmotors standard.
- PE's by others.
- Wheel diverts include drop out tubs. Maintain at least 10" clearance below divert for removal.

## 10.13: SPUR CONSTRUCTION

- Standard spur available in ITRCB or IB-E version (Transportation only).
- Standard spur angles are created for 30 & 45 degree, RH/LH.
- Each spur has a conversion cable to allow for proper power and control signal flow.
- Each spur includes a wheeled guardrail to direct packages.

# Chapter 11: ITOH DENKI CBM-105 & CB-016 DRIVERCARD

## 11.1: CBM-105 & CB-016 DRIVERCARD GENERAL NOTES:

- For “transportation” conveyor segments, and devices not requiring zoned accumulation (transfers, merges, wheel diverts). Requires PLC or other external control for basic run and reverse functions.
- MHS Conveyor CBM-105 (ITR<sup>CB</sup>) conveyor includes:
  - Power harness – installed with taps to individual drivercards and bed-to-bed plug-in connections.
  - Drivercard – installed, connected to power harness, and speed pre-set.
  - CN2 – 5-PIN connector installed in card with “run harness” pre-wired to all cards.
  - Motorized rollers – installed in bed, motor cable connected.

All beds factory tested for flow direction, speed, and proper plug-in connections.

## 11.2: CBM-105 & CB-016 FEATURES:

- Adjustable acceleration and deceleration time (0 to 2.5 seconds)
- Stable speed operation
- Manual or automatic recover of the thermal overload device
- One (1) rotary switch to select up to 10 different fixed speeds or external voltage input for up to 20 fixed speeds
- Forcibly stops motor if motor is locked for more than 4 seconds or thermal overload error lasts for 1 second or more
- Two (2) LEDs (red & green) to identify the type of error and power
- Back EMF error for over speeding protection
- Pulse signal output to indicate motor revolution
- Servo brake control allows product to maintain its position after run signal is removed
- Error output selection for output in normal or abnormal status
- Low Voltage Protection – See “LED’s and Error Indications” section
- External Direction control – See “User Interface Switch Settings” section

## 11.3: CBM-105 & CB-016 SPECIFICATIONS:

### Operation:

- Cycle: 1 second ON; 1 second OFF (max on-off cycles 30/minute)
- Continuous duty permissible
- Do not overfeed by 150% of no-load operating speed (back EMF will be generated)
- Power: +24V DC +/-10% (full-wave rectified, smoothed current <10% ripple)
- Power ON delay <1 second
- 4 Amp locking current
- Input signal level for activation minimum 18V for PNP
- See "Connections" section for I/O circuit current limitations/requirements
- PNP circuitry for all I/O, except for CN2 output 2-4, which is configurable as PNP or NPN.
- Servo brake mode – See "User Interface Switch Settings" section

### Protection:

- Thermal Overload 185°F (85°C) on PCB
- Thermal Overload 221°F (105°C) in motor
- 5 Amp Internal fuse (non-replaceable) to power supply
- Internal diode circuit protection (Voltage Polarity)

### Environment:

- Ambient Temperature 32-104°F (0-40°C)
- <90% Relative Humidity (No condensation)
- No Corrosive Gases
- Vibration <0.5G

See Itoh-Denki technical document for additional information: <http://itohdenki.com/>

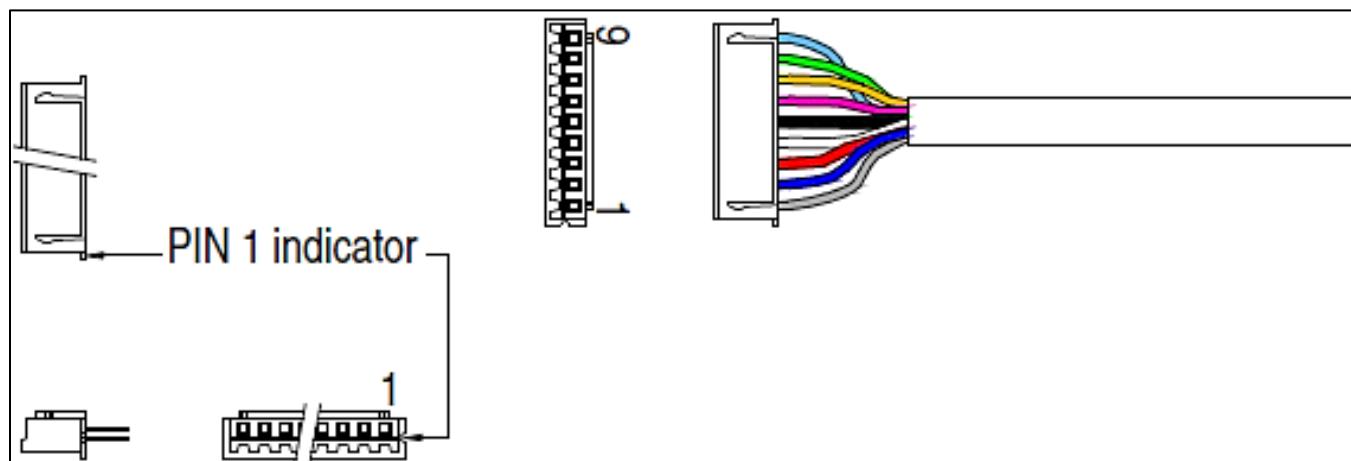

### 11.3.1: CBM-105 & CB-016 Connections

<b>CN1 – 2 PIN connector for Power</b>	<b>Male Connector on Card</b> WAGO #734-162	<b>Female Connector for Wiring</b> WAGO #734-102  TGW PN:1104417 & 18
--	--	--

PIN	<b>Description</b>	
1	+24VDC +/-10% (full-wave rectified, smoothed current <10% ripple)	Wire Size: 28-14AWG
2	0V	

<b>CN2</b>  <b>5 PIN connector for external control</b>	<b>Male Connector on Card</b> WAGO #733-335	<b>Female Connector for Wiring</b> WAGO #733-105  TGW PN:733105 & 1104417
PIN	<b>Description</b>	
1	+24V DC (Input) – RUN	
2	+24V DC (Input) – DIR	
3	0-+10V DC (Input) – V-IN (Allows analog speed control, 1.6mA/card)	
4	+24V DC (Output) – ERR (Open collector: 25mA max)	
5	+24V DC (Output) – PLS (Open collector: 25mA max)	

CN3 – 9 PIN connector for Motor	Male Connector on Card JST #S9B-XH-A	Female Connector for Wiring JST #XHP-9
PIN	Description	
1	GND - Grey	Wire Size: 28-22AWG & 24-22AWG motor phases  Terminal pins: JST #SXH-001T-P0.6
2	+12V DC – Blue	
3	Motor Phase U – Red	
4	Motor Phase V – White	
5	Motor Phase W – Black	
6	Hall Sensor U – Violet	
7	Hall Sensor V – Orange	
8	Hall Sensor W – Green	
9	Thermistor – Light Blue	

**11.3.2: CBM-105& CB-016 Installation Precautions**

Precaution	Action	Reason
<b>Power Supply</b>	Power supply must be sized appropriately for the number of cards/rollers it provides power to. See "Power Supply Application Information" section.	Exceeding the power supply capacity can cause low voltage issues.
<b>Multiple power supplies</b>	0V line of all power supplies associated with a conveyor "unit" (cards, rollers, and external controls) need to be connected.	This completes the signal path between conveyor sections and system controls.
<b>Voltage drop across power bus</b>	Use suitable gauge wire in relation to distance and current draw.	Voltage must not drop below 21.6V DC or voltage faults will occur

### 11.3.3: CBM-105 & CB-016 User Interface Switch Settings

DIP Switches (SW1) – User Settings				
DIP Switch	Function	ON	OFF	Default Setting
1	Thermal device/low voltage/back EMF recover	Manual	Automatic (Thermal restarts 1min after cool down)	ON
2	Speed change selection	External (0~10V DC applied)	Internal (Rotary switch)	OFF
3	DIR* (No external DIR signal; viewed from cable side)	FS/FP – CCW FE – CW	FS/FP – CW FE – CCW	OFF
4	Error signal activity	Active during normal status	Active during abnormal status	ON
5	Brake mode	Servo	Dynamic	OFF
6	Error output (FN type)	PNP	NPN	OFF
	Error output (FP type)	PNP	NPN	ON

\*External direction signal only. If a direction change signal should occur while the motor is running, the motor will first stop for 0.5s. The motor will then start in the new direction.

#### Rotary switch (SW2)

Applicable when using internal speed control (DIP-SW2 OFF)

Factory default position 9 (highest speed), MHS Conveyor presets speeds on production beds

#### Potentiometers\*

##### VR1 – Acceleration

Adjust acceleration time from 0~2.5 seconds after the RUN signal is applied

##### VR2 – Deceleration

Adjust deceleration time from 0~2.5 seconds after the RUN signal is removed

\*VR's turn 270°

#### Brake

Servo Brake mode with DIP-SW 1-5 ON

- Holds Power Roller in position 0.2 seconds after the RUN signal is removed
- If external force moves the Power Roller it will return back to its initial stopped position

- Maximum holding force is 17.7 lb.-in at 1.0 Amp (Based on a PM486FE-60)
- Servo brake does not function during an error condition

**Motor pulse output signal**

- NPN (0V) output from CN2-5
- Two (2) pulses per motor revolution

**11.3.4: CBM-105& CB-016 LED's and Error Indications**

Status	LED1 (green)	LED2 (red)	ERR Output (DIP-SW4 setting)		Error Condition*	Result	Solution
			OFF	ON			
Normal	• (ON)	○ (OFF)	○	•	n/a	n/a	n/a
No power	○ (OFF)	○ (OFF)	○	○	n/a		
Thermal overload	• (ON)	● (ON)	●	○	Motor or PCB above operating temperature	1	
Motor lock	• (ON)	Blinks (1Hz) ● ○	●	○	Motor locked (>4s)	2	
Motor unplugged	• (ON)	● (ON)	●	○	Motor not connected to card	3	
Open Fuse	○ (OFF)	Blinks (6Hz) ●●●●●● ●●●●●●	●	○	Current exceeded 5A	4	
Back EMF	• (ON)	Blinks/off (6Hz) ●○●○●○●○ ○○○○○○	●	○	Supply voltage >40VDC for 2s, or 60V DC for 0.1s	5	
Low voltage (<15V)	• (ON)	Blinks (6Hz) ●●●●●● ●●●●●●	●	○	<15V DC (>1s or 5x in 0.5s)	6	

### 11.3.5: CBM-105 & CB-016 Solution

1. See more information under Input / Output Settings, DIP switch 1-8
  - A signal applied to CN2-1 (RUN) or CN2-2 (DIR) will reset this error status
  - Thermal overload can only be reset if the temperature has fallen back into the operating range
2. Remove the cause of the motor lock and clear the zone
3. Remove power from the card, plug in the motor connector, and then reapply power
4. Replace the card
5. If card detects back EMF over 40V DC for 2sec or 60V DC for 0.1sec, the motor will stop running and go into dynamic brake condition to slow the product down
  - Back EMF results from forcing a roller to run at >150% of its set operating speed
  - If DIP-SW1 is ON (Manual recovery), card must be reset 1sec after voltage drops under 30V DC. Applying a signal to CN2-1 or CN2-1 will reset error.
  - If DIP-SW1 is OFF (Automatic recover), card will restart roller 1sec after the voltage drops below 30V DC (if run signal is active)
6. Check power supply output, voltage drop along power bus, and roller count per power supply.

### 11.3.6: ITR CBM-105 and CB-016 Electrical Components

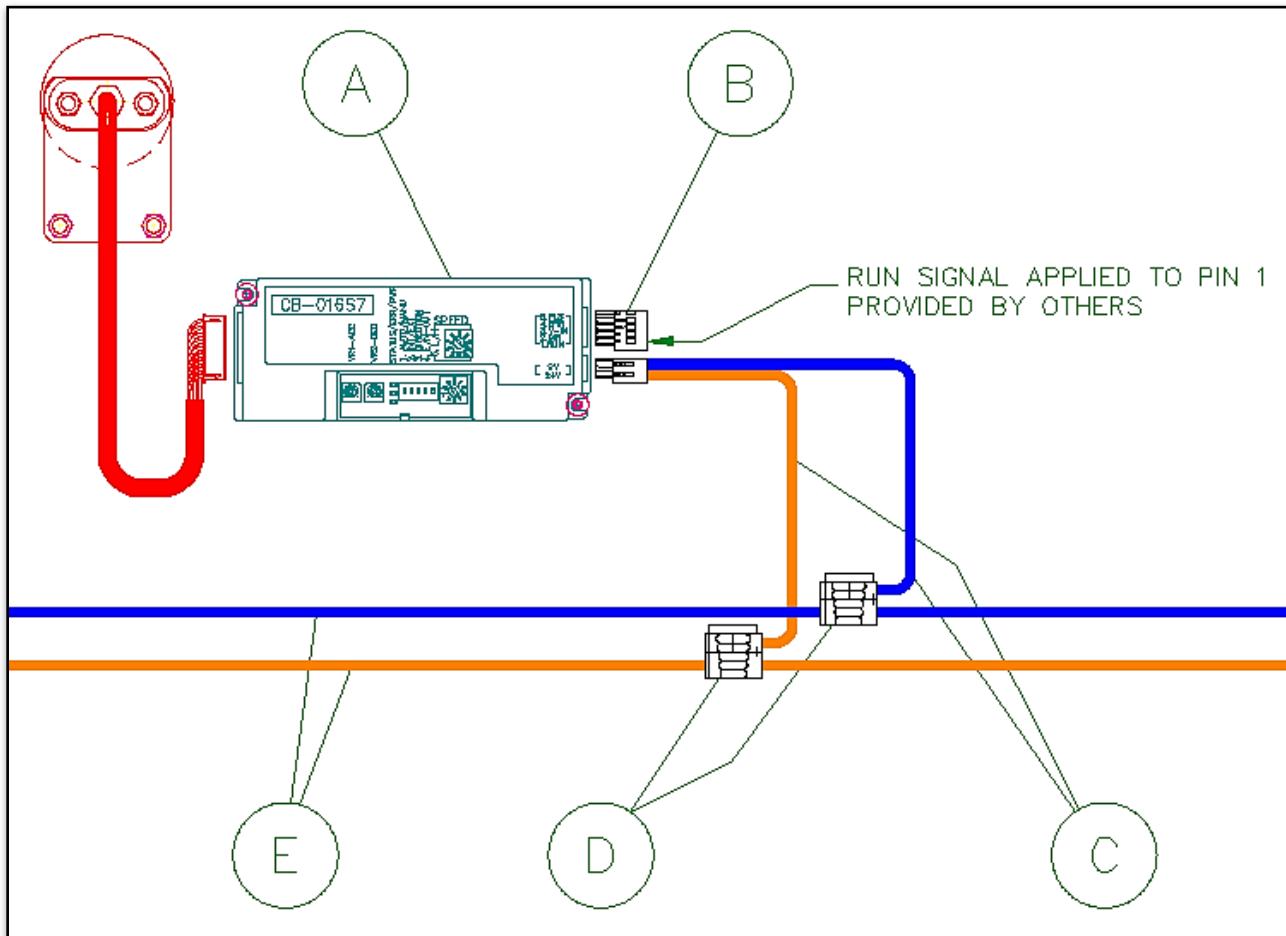

Figure 1 –CBM-105 Drivercard and CB-016

- A. CB-016P7 (P/N 1139716 with hardware) or  
CB-105FP (P/N 1153931 with hardware)
- B. 5-Pin connector (for run signal connection): 733105
- C. Power tap cable (for short distances < 6"): 1139543
- D. Scotchlok connectors (connect power tap to power harness): 3M567 (Brown)
- E. Power harness – see power harness table

Table 1: Power Harness

Item No.	Description

## Chapter 12: ITOH DENKI HB-510 DRIVERCARD

**General Information**

**Dimensions**

**User Interface – Default Settings**

Setting	Description
1ERR BLOCK	1 Error Block
2DIR BLOCK	2 Direction Block
3ESTOP BLOCK	3 Emergency Stop Block
4SPEED SET	4 Speed Set
5INT/TEST	5 Internal/Test
6AUTOMANU	6 Auto/Manual
7DIR/TEST	7 Direction/Test
8STOP/RUN	8 Stop/Run
1INPNPNP OUT	1 IN PNP Output
2SEN/SYN OUT	2 Sensor/Sync Output
3GEAR SET 1	3 Gear Set 1
4GEAR SET 2	4 Gear Set 2
5ZERZ	5 Zero
6ZERZ	6 Zero
7DIRECTION	7 Direction
8STOP/RUN	8 Stop/Run

DIP Switch 1 and DIP Switch 2 are shown below the table. The rotary switch has positions 0, 1, 2, 3, 4, 5, 6, 7, and 8. The LEDs indicate Power (PWR), Sensor (SENSOR), and Error (ERR).

**Standard Conveyor Configuration – PNP output signal types**

### 12.1: GENERAL NOTES

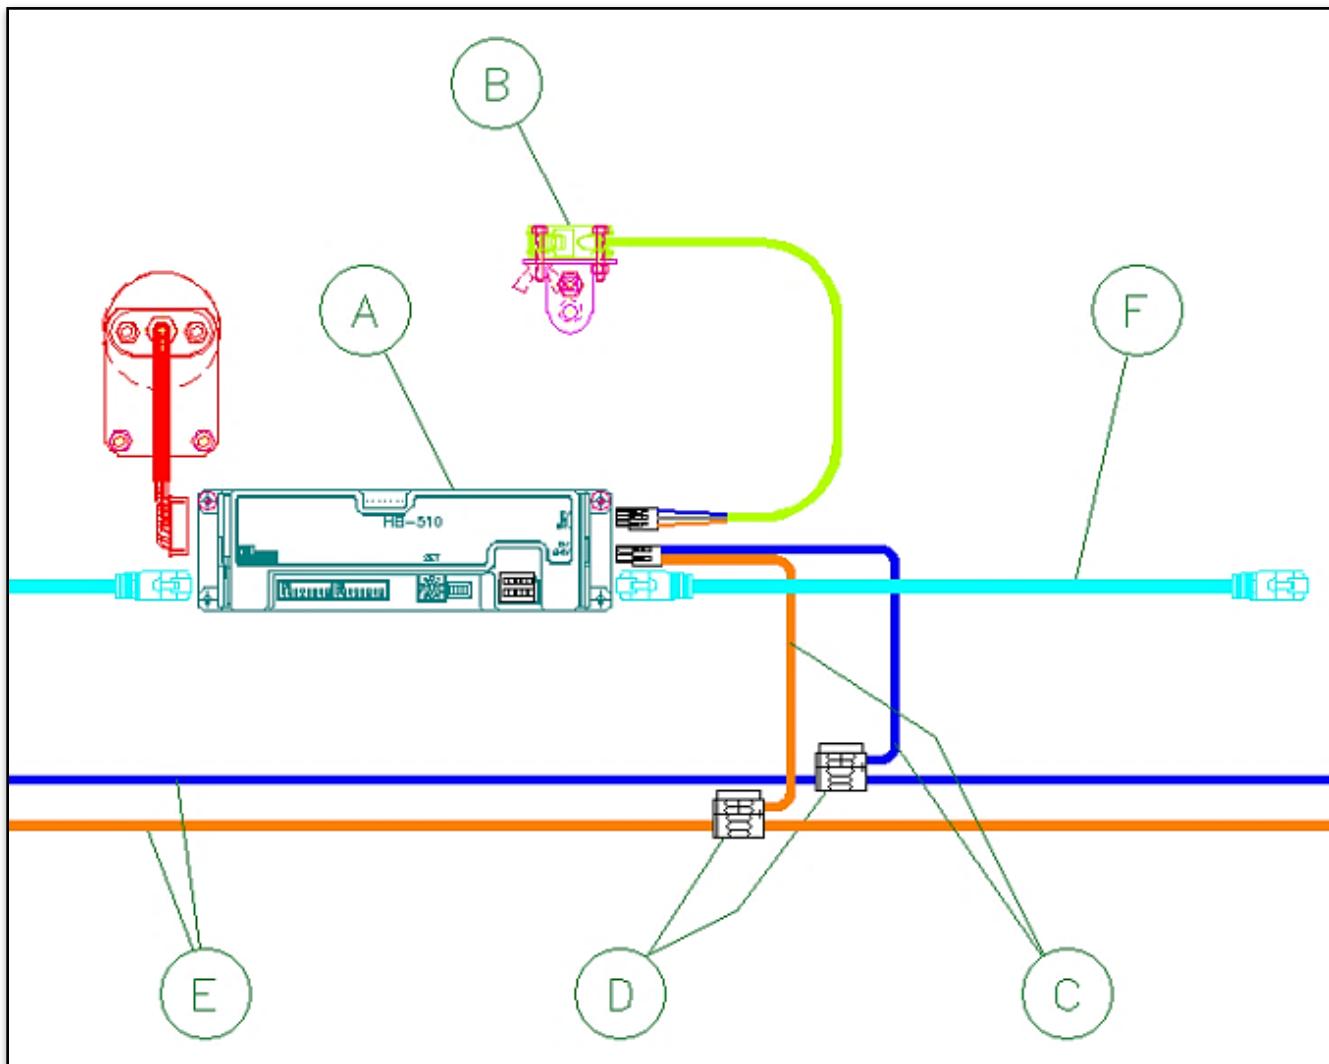

- Local accumulation control with minimal higher level control system interface requirement (infeed zone, line full status, discharge zone). See Application Guideline section for details.
- MHS Conveyor HB-510 conveyor (ITRHB) includes:
  - Zone sensor – installed, connected, and pre-aligned to reflector.
  - Power harness – installed with taps to individual drivercards and bed-to-bed plug-in connections.
  - Drivercard – installed, connected to power harness and sensor, and speed pre-set.
  - Card-to-card communication cables (CAT5E) factory installed.
  - CN2 – 5-PIN connector installed in card.
  - Motorized rollers – installed in bed, motor cable connected.
  - All beds factory tested for PE alignment, flow direction, speed, and proper plug-in connections.

See Itoh-Denki technical document for additional information: <http://itohdenki.com/>

## 12.2: HB-510 FEATURES

- Built in thermal protection for both driver card and power roller
- Three LED's to identify type of error and number of occurrences
- Dynamic brake control
- Stable speed function to ensure articles of different weights travel at the same rate
- Variable speed control by rotary switch or by external voltage input for up to 10 speeds
- Direction control by onboard DIP switch or external signal input
- Logic for general zero pressure accumulation (ZPA) control is built in
- Direct connection for photo eye to both power it and receive its output signal
- Easy connection between adjacent HB-510's with Cat5E communication cable to simplify wiring
- Flexible Zone Recognition (patented) to handle long articles which simultaneously block multiple sensors
- Also available for rollers with built-in brakes, HB-510B
- Compatible with Motorized Rollers PM486FS, PM486FE, PM486FP, PM570FE, PM605FE, PM635FS

## **12.3: ITR HB-510 ELECTRICAL COMPONENTS**

*Figure 2 – HB-510 Drivercard*

- A. HB-510 item (includes hardware and 5-pin connector): P/N 1137754
  - B. Photoeye (ZL eye with 3-pin connector mounted to bracket with reflector in bag): PN1137686
  - C. Power tap cables (for short distances < 6"): PN1139543
  - D. Scotchlok connectors (connect power tap to power harness): P/N 3M567 (Brown)
  - E. Power harness: See table 1 below
  - F. Cat5E communication cable: See table 2 below.

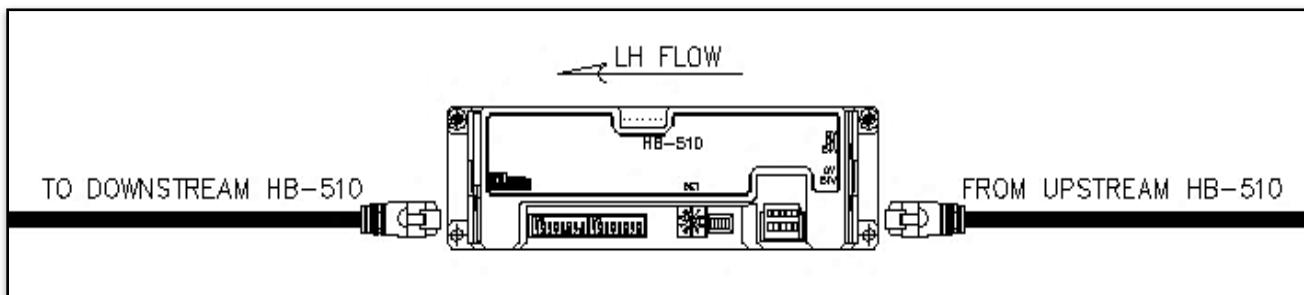

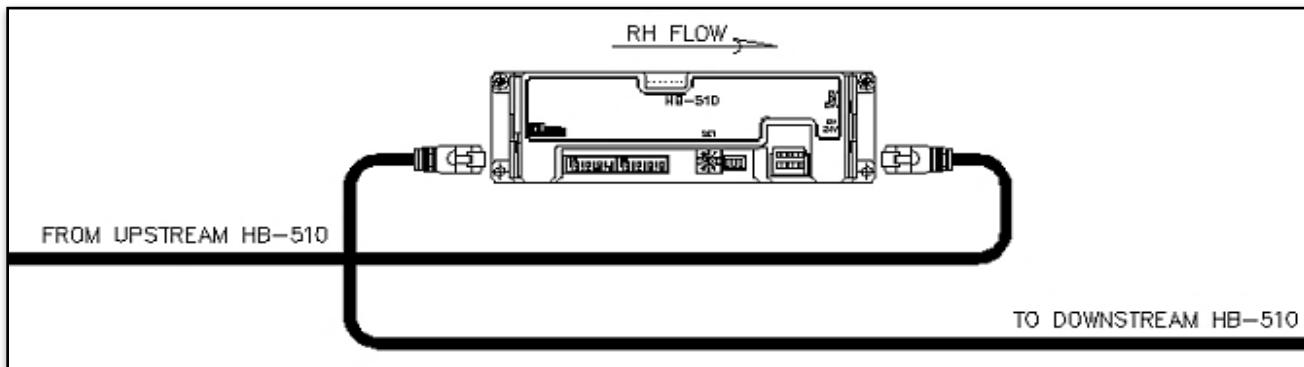

*Table 1: Replacement Parts –Power Harness*

<b>Item No.</b>	<b>Description</b>

E0009905	CABLE,CTRLS-CAT5E-14'-GRAY
E0009904	CABLE,CTRLS-CAT5E-25'-GRAY

Cat5E cable (Upstream cable goes in right side of card, and downstream cable comes out the left side of the card, RH generally requires a longer cable). See diagrams below:

*Figure 3 – HB 510 Communication Cable LH Flow**Figure 4 – HB-510 Communication Cable RH Flow*

### 12.3.1: HB-510 Specifications

#### Operation:

- Cycle: 1 second ON; 1 second OFF (max on-off cycles 30/minute)
- Continuous duty permissible
- If being fed by faster upstream equipment, do not exceed 150% of no-load operating speed (back EMF will be generated)
- Power: +24V DC +/-10% (full-wave rectified, smoothed current <10% ripple)
- See "Connections" section for I/O circuit current limitations/requirements
- PNP circuitry for all I/O, except for CN2 outputs 2-4 & 2-5, which are configurable as PNP or NPN

#### Protection:

- Thermal Overload 185°F (85°C) on PCB (Printed Circuit Board)
- Thermal Overload 221°F (105°C) in motor
- 5A Internal fuse (non-replaceable) to power supply
- Internal diode circuit protection (Voltage Polarity)

#### Environment:

- Ambient Temperature 32-104°F (0-40°C)
- <90% Relative Humidity (No condensation)
- No Corrosive Gases
- Vibration <0.5G

### 12.3.2: HB-510 Connections

<b>CN1 – 2 PIN connector for Power</b>		<b>Male Connector on Card</b> <b>WAGO #734-162</b>	<b>Female Connector for Wiring</b> <b>WAGO #734-102</b>
<b>PIN</b>	<b>Description</b>		
1	+24VDC +/-10% (full-wave rectified, smoothed current <10% ripple)		Wire Size: 28-14AWG
2	0V		

<b>CN2 – (Included with Card)</b> <b>5 PIN connector for external control</b>		<b>Male Connector on Card</b> <b>WAGO #733-335</b>	<b>Female Connector for Wiring</b> <b>WAGO #733-105</b>	
<b>PIN</b>	<b>Description</b>			
1	+24V DC (Input) – Release, Force Run, or Force Zone Stop		Wire Size: 28-20AWG	
2	+24V DC (Input) – DIR/E-stop			
3	0-+10V DC (Input) – V-IN (Allows analog speed control, 1.6mA/card)			
4	+24V DC (Output) – OUT-A (Open collector: 25mA max)			
5	+24V DC (Output) – ERR (Open collector: 25mA max)			

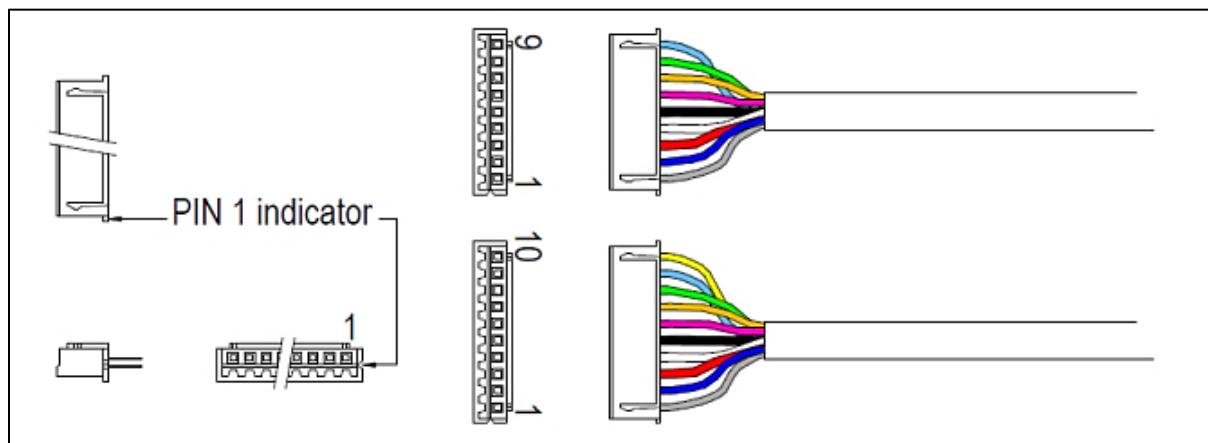

<b>CN2 – (Included with Card)</b>		<b>Male Connector on Card</b>	<b>Female Connector for Wiring</b>
<b>5 PIN connector for external control</b>		<b>WAGO #733-335</b>	<b>WAGO #733-105</b>
<b>PIN</b>	<b>Description</b>		
1	+24V DC (Input) – Release, Force Run, or Force Zone Stop		
2	+24V DC (Input ) – DIR/E-stop		
3	0-+10V DC (Input) – V-IN (Allows analog speed control, 1.6mA/card)		
4	+24V DC (Output) – OUT-A (Open collector: 25mA max)		
5	+24V DC (Output) – ERR (Open collector: 25mA max)		

<b>CN3 – 3 PIN connector for Sensor</b>		<b>Male Connector on Card</b>	<b>Female Connector for Wiring</b>
		<b>WAGO #733-363</b>	<b>WAGO #733-103</b>
<b>PIN</b>	<b>Description</b>		
1	+24V DC (Power supply to Sensor)		
2	+24V DC (sensor signal input) – Dark Operate PNP sensor		
3	0V		

### 12.3.3: CN4 & CN5 – Control Interconnect

- CAT5E cable connection is for card to card signaling only, is not a network, and does not follow Ethernet PIN order.
- See Itoh Denki for additional information on CN 4 & 5 pin outs, as well as information for interfacing HB-510 drivercards with previous generation cards (HB-508).

CN6 – 9 or 10 PIN connector for Motor (10 PIN for brake roller)		Male Connector on Card JST #S9B-XH-A (S10B if brake)	Female Connector for Wiring JST #XHP-9 (-10 if brake)
PIN	Description		
1	GND - Grey		Wire Size: 28-22AWG & 24-22AWG motor phases  Terminal pins: JST #SXH-001T-P0.6
2	+12V DC – Blue		
3	Motor Phase U – Red		
4	Motor Phase V – White		
5	Motor Phase W – Black		
6	Hall Sensor U – Violet		
7	Hall Sensor V – Orange		
8	Hall Sensor W – Green		
9	Thermistor – Light Blue		
10	Brake - Yellow		

### 12.3.4: HB-510 Installation Precautions

Precaution	Action	Reason
<b>More than 30 cards connected together with the CAT5E communication cable</b>	The first card after each set of 30* must be set as follows:  DIP Switch 1-1: OFF  DIP Switch 1-2: OFF  DIP Switch 1-3: OFF   *Standard conveyor configuration; starting with first upstream card. If using ERR, DIR or ESTOP, signal must be connected to each group of 30 cards.	When a card has its ERR, DIR or ESTOP signal activated, that signal is communicated through the CAT5E cable by sinking the signal. Each card's circuitry must be able to handle the current sourced by other cards on the chain. More than 30 cards will exceed the current limit and damage the printed circuit boards.
<b>Powering ON</b>	Maintain safe distance from the system when powering on, as equipment will start automatically.	When the system is first powered on, a 5-7 second startup cycle will initiate. Unoccupied zones will run at a slow speed to advance articles which may be between photo-sensors (See Sensor function). After this, occupied zones will start running if there are open downstream sensors.
<b>Low impedance connection to PNP output(s)</b>	DO NOT connect an output terminal (CN2-4, CN2-5) set for PNP directly to 0V, GND, or a low impedance input on a controller.	When the PNP signal is active, the low impedance input will draw a high current, potentially damaging both the drivercard and the controller.
<b>Multiple power supplies</b>	0V line of all power supplies associated with a conveyor "unit" (cards, rollers, and external controls) need to be connected.	This completes the signal path between conveyor sections and system controls.
<b>Voltage drop across power bus</b>	Use suitable gauge wire in relation to distance and current draw.	Voltage must not drop below 21.6V DC or voltage faults will occur.

### 12.3.5: HB-510 User Interface Switch Settings

Signal Block Settings						
DIP Switch	Function	On		Off		Default Setting
		CN5 (Left)	CN4 (Right)	CN5 (Left)	CN4 (Right)	
1-1	ERR signal transmission	Transmit & Receive	Transmit & Receive	Transmit & Receive	Blocked	ON
1-2	DIR signal transmission				Blocked	ON
1-3	ESTOP signal transmission		n/a	Blocked	Blocked	ON
1-4	SPEED signal transmission Left (Downstream)				n/a	ON
1-5	SPEED signal transmission Right (Upstream)	n/a	Transmit & Receive	n/a	Blocked	ON

Input / Output Settings				
DIP Switch	Function	ON	OFF	Default Setting
1-6	SPEED adjustment	External: 0-10V DC	Internal: Rotary switch	OFF
1-7	DIR or ESTOP input (CN2-2)	ESTOP signal input	DIR signal input	OFF
1-8	Reset for thermal recovery	Manual input recover	Automatic recover	ON
2-1	Output signal type (CN2-4 & CN2-5)	PNP signal output	NPN signal output	ON**
2-2	Sensor or Synchronous output (CN2-4)	Output is active (+24V) while internal motor RUN signal is ON.	Output is active (+24V) while photo-sensor (CN3-2) signal is ON.	ON
2-8	STOP or RUN input (CN2-1)	RUN signal input	STOP signal input	ON

**Timer Settings – Allows card timers to be adjusted for fast (single stage) down to slow (three stage) rollers, default setting is for two stage. Also can be used to lengthen run timers for long (>36") zones.**

Dip Switch		Gear Stages	Time (seconds)		
			Sensor Timer	Run Hold Timer	Jam Timer
OFF	OFF	1	0.3-1.2	0.3-1.2	0.6-2.2
OFF (Default)	ON (Default)	2	1.0-4.0	1.0-4.0	2.0-8.0
ON	OFF	3	4.0-14.0	4.0-14.0	7.5-27.0
ON	ON	n/a	Motor runs continuously; for trouble shooting only		

Other Settings						
DIP Switch	Function	ON		OFF		Default Setting
2-5	Release modes	ZP1 Train/Slug release		ZP2 Singulated release		ON
2-6	Last zone mode	ZB Standard zone		ZE Last (discharge) zone		ON
2-7	Motor direction*	FE	FS/FP	FE	FS/FP	ON
		CCW	CW	CW	CCW	

\*Motor direction (as viewed from the cable side; PM486 series) is independent of ZPA logic flow direction.

**Notes:**

- Table based on PM486FE-60 roller
- See Roller Performance Tables for additional card/roller speed combinations
- When using an analog signal for external speed control, note that roller speed selections are in fixed increments and not infinitely adjustable.

### 12.3.6: HB-510 LED's and Error Indications

Status	LED1 (green)	LED2 (orange)	LED3 (red)	ERR Signal (CN2-5)	Error Condition	Result	Solution*
Normal	 (ON)  <small>Blinks (1Hz)</small>   <small>while running</small>	 (ON)  <small>When sensor signal is ON</small>	 (OFF)	 (ON)	n/a	n/a	n/a
Thermal overload			 (ON)	 (OFF)	Motor or PCB above operating temperature		1
Motor lock	 (ON)		<small>Blinks (1Hz)</small>  	 (ON)	Motor locked (>4s)		2
Motor unplugged			 (ON)		Motor not connected to card		3
JAM error		<small>Blinks (1Hz)</small>  	 (OFF)		Jam Timer activated		4
Open fuse Low voltage	 (OFF)	 (ON)	<small>Blinks (1Hz)</small>  		Low voltage or current exceeded 5A		5
Current limit	<small>Blinks (1Hz)</small>   <small>while running</small>	<small>When sensor signal is ON</small>	<small>Blinks (5Hz)</small>          	 (ON)	High current draw	n/a	6

### 12.3.7: Solution

- See more information under Input / Output Settings, DIP switch 1-8
  - A signal applied to CN2-1 (INPUT) will reset this error status
  - Thermal overload can only be reset if the temperature has fallen back into the operating range
- Remove the cause of the motor lock and clear the zone
  - A signal applied to CN2-1 (INPUT) AND DIP switch 2-8 set to ON (RUN) will reset this error status
- Remove power from the card, plug in the motor connector, and then reapply power
- Remove the cause of the jam and clear the zone
  - A signal applied to CN2-1 (INPUT) will reset this error status

- As long as a signal is applied to CN2-1, jam error status will not turn ON
- Replace the card
  - Not usually a cause for concern, unless it is occurring frequently over the entire running cycle

### 12.3.8: HB-510 Drivocard speed chart

HB-510 DRIVERCARD / FP- ____ ROLLER								
ROLLER: FE-17			ROLLER: FE-60			ROLLER: FE-100		
NOMINAL SPEED	ROTARY SWITCH	ACTUAL SPEED ± 5% (fpm)	NOMINAL SPEED	ROTARY SWITCH	ACTUAL SPEED ± 5% (fpm)	NOMINAL SPEED	ROTARY SWITCH	ACTUAL SPEED ± 5% (fpm)
13	0	13.8	45	0	49.2	170	0	174.8
18	1	18.4	65	1	65.6	230	1	232.9
20	2	23	80	2	82		2	290.3/(239.4)
25	3	27.6	95	3	98.4		3	349.3/(239.4)
30	4	32.5	110	4	114.8		4	
35	5	37.1	130	5	131.2	235	5	
40	6	41.7	145	6	147.6		6	407.4/(239.4)
45	7	46.3	160	7	164		7	
50	8	50.9/(49.9)	180	8	180.4/(176.8)		8	
	9	55.3/(49.9)		9	196.8/(176.8)		9	

Note: Speed with two numbers are " NO-LOAD / RATED". Rated numbers are what the roller is capable of doing under a continuous duty full load condition.

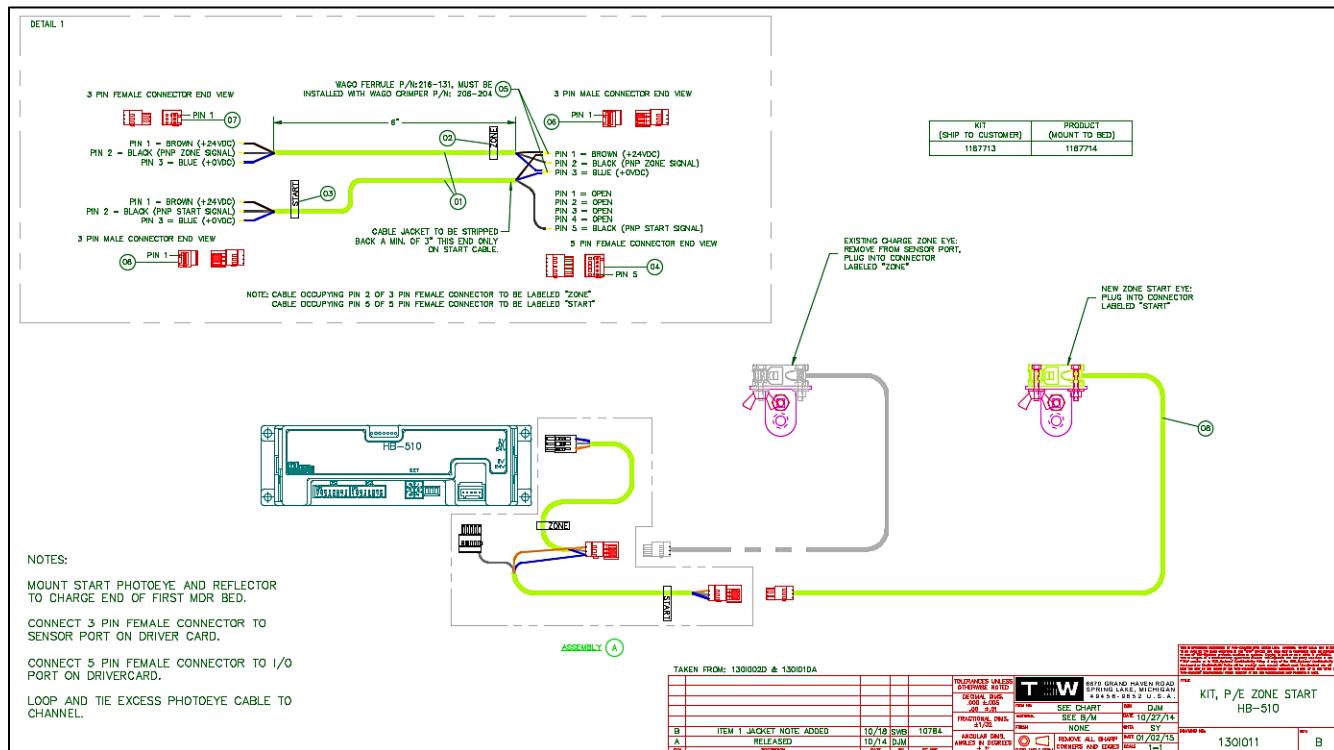

HB-510 DRIVERCARD / FP- ____ ROLLER								
ROLLER: FP-55			ROLLER: FP-100			ROLLER: FP-140		
NOMINAL SPEED	ROTARY SWITCH	ACTUAL SPEED ± 5% (fpm)	NOMINAL SPEED	ROTARY SWITCH	ACTUAL SPEED ± 5% (fpm)	NOMINAL SPEED	ROTARY SWITCH	ACTUAL SPEED ± 5% (fpm)
50	0	53.5	240	0	243	240	0	243.4
70	1	71.2		1	324.1/(259.1)	320	1	324.5
85	2	88.9		2		405	2	405.4
105	3	106.9		3			3	486.6/(478.2)
120	4	124.6		4			4	567.7/(478.2)
140	5	142.4	255	5	404.8/(259.1)		5	
160	6	160.4		6		475	6	
175	7	178.1		7			7	627.1/(478.2)
180	8	195.8/(181.1)		8			8	
	9	204.3/(181.4)		9			9	

Note: Speed with two numbers are " NO-LOAD / RATED". Rated numbers are what the roller is capable of doing under a continuous duty full load condition.

## Chapter 15: ITOH DENKI IB-E DRIVERCARD

### 15.1: GENERAL NOTES:

The IB-E is a dual 24V brushless DC motor driver module that is compact, network-ready, configurable, and programmable.

### 15.2: FEATURES

- For transportation and accumulation conveyor segments
- Two brushless DC motor drivers
- IB-E03B: 4A max per driver
- Built-in motor overload protections
- Two powered connections for sensors
- Three isolated auxiliary inputs
- Five isolated auxiliary outputs, two at 1A (max) each
- Motor lifetime data
- DLR (device level ring) applicable
- 2-port built-in Ethernet switch (based on RA switch technology)
- All beds factory tested for flow direction, speed, and proper plug-in connections.

See Itoh-Denki IB-E and ICE Manual for additional information: <http://itohdenki.com/>

## 15.3: OPERATING ENVIRONMENT

Conditions		Notes
Ambient temperature	-20 to 40°C (-4 to 104°F)	No condensation, water, frost, or ice
Humidity	≤ 90% Relative Humidity	
Atmosphere	No corrosive gas	
Vibration	≤ 1.0G	
Installation	Indoor	
Pollution level	2	Conforming to IEC60640-1 and UL840
Ovvoltage category	2	

## 15.4: POWER REQUIREMENTS

Item	Specification
• Input Power	• 24V DC (+/- 5%)
• Typical Loaded Current Draw Per Motor* for IB-E01 and IB-E03B	• 2 ~ 3A – Motor A 2 ~ 3A – Motor B
• Maximum Current Draw Per Motor For IB-E01 and IB-E03B	• 4A – Motor A 4A – Motor B
• Typical Loaded Current Draw Per Motor* for IB-E04F	• 3 ~ 4A – Motor A 3 ~ 4A – Motor B
• Maximum Current Draw Per Motor for IB-E04F	• 7A – Motor A 7A – Motor B
• Maximum Current Draw Per Remote (Auxiliary) Output	• 1A – Remote output 1 1A – Remote output 2 20mA – Remote output 3 20mA – Remote output 4 20mA – Remote output 5

\* Actual current draw is dependent on load (size and weight) and motorized roller model used.

**Note:** The Remote (Auxiliary) Outputs are isolated from the IB-E power. Therefore, a separate 24V DC power source may be used. If not, the Remote Output current draw should be factored into the IB-E's overall current draw when used.

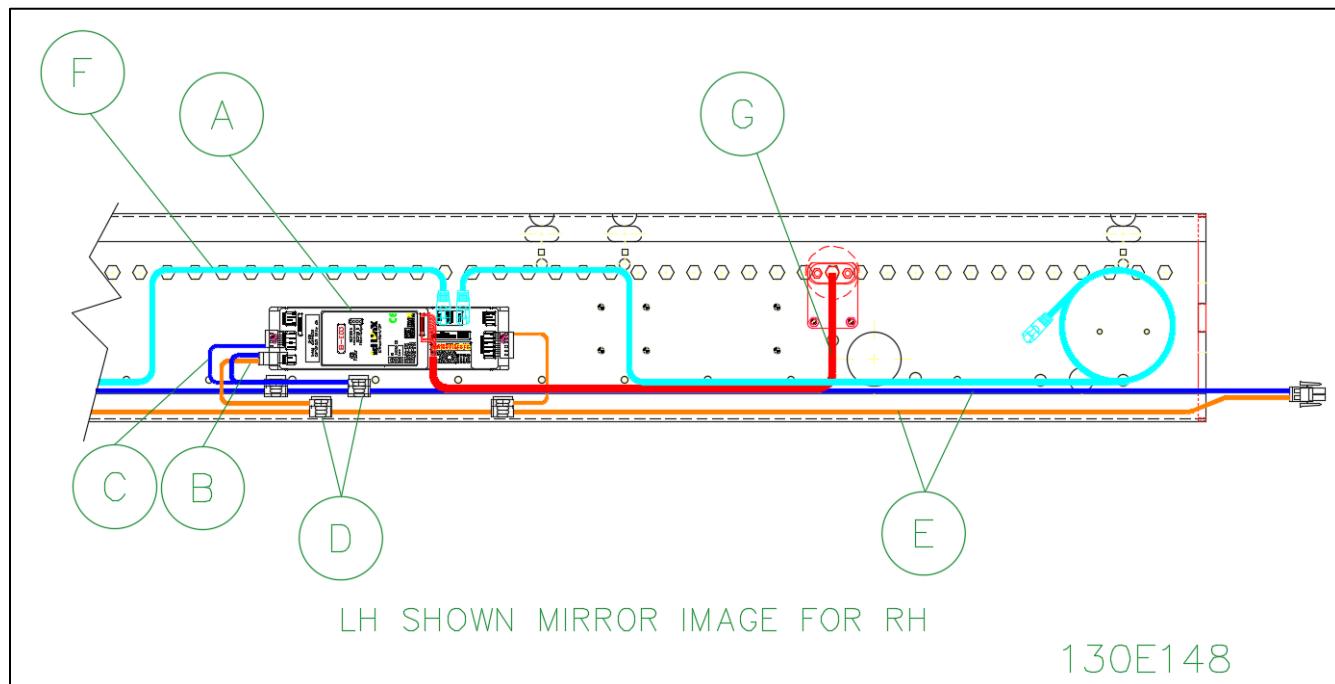

## 15.5: APPLICABLE POWER ROLLERS (MOTORIZED ROLLERS)

### 15.5.1: IB-E01 and IB-E03B

Standard*	With Brake Option
PM486FE	PM486FE-BR
PM486FS	PM486FS-BR
PM486FP	PM486FP-BR
PM570FE	PM570FE-BR
PM605FE	PM605FE-BR
PM635FS	PM635FS-BR

\* IB-E01 and IB-E03B are designed to work with both our standard models and brake models. The (mechanical) brake option requires a 10th pin for the brake coil. Therefore, standard model rollers will need to have either a 10-pin connector on the motor cable or a 9-to-10-pin extension cable.

## 15.6: ITR IB-E ELECTRICAL COMPONENTS

- A. IB-E03 driver card (includes hardware, no connectors): 1166288
- B. Cable, Power IB-E (for short distances < 6"): 1165236
- C. Cable, Remote in IB-E, 9" 16GA blue wire: 1165238
- D. Scotchlok Connectors (connect power tap to power harness): 3M567
- E. Power Harness: See Table 1.
- F. Cat5E Communication Cable: See Table 2.
- G. Cable, Motor Extension: See Table 3.

### 15.6.1: IBE Photoeye Cable Kit

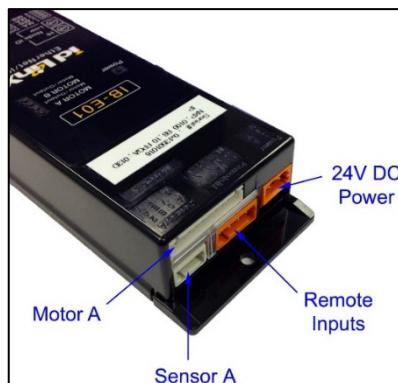

### 15.6.2: Replacement Parts – IB-E Photoeye Kit

General Photoeye Cables & Kit				
Balloon	Item #	Description	Mounted	DWG #
1 - 6	1165676	KIT,CTRLS-PE ZONE START-IBE	FIELD MOUNTED	130I010

## 15.7: HARDWARE CONNECTIONS

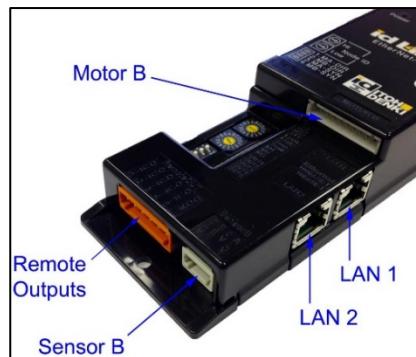

### 15.7.1: Left ("A") Side

Connection	Pin Outs	Description
Motor A	 1      10	Brushless DC Driver When configured as a discrete output (NPN, sinking, only): 3 – Discrete output U (IB-E04F pins 3 & 4) 4 – Discrete output V (IB-E04F pins 5 & 6) 5 – Discrete output W (IB-E04F pins 7 & 8) See "Precaution: Motor Port Discrete Output Wiring" below.  Connector for wiring: <b>JST XHP-10</b> (IB-E04F XHP-12) Included with motorized roller
Sensor A	 1    4	1 – 24V DC (550mA max) 2 – Sensor input (35mA max) 3 – 0V 4 – Sensor alarm input (35mA max)  IB-E01: Inputs are auto-sensing, responding to either PNP (+24V DC) or NPN (0V) signals. In the normal state, the input pins have a <b>+12V DC reference</b> .  <b>IB-E03B and IB-E04F:</b> Signal types are set as PNP or NPN from factory. Noted as a “-P” or “-N”, respectively (e.g. IB-E03B-P)  Connector for wiring: <b>WAGO 733-104</b>
Remote Inputs (Auxiliary)	 1    4	1 – Remote input 1 2 – Remote input 2 3 – Remote input 3 4 – Common (24V DC for NPN or 0V for PNP)  Connector for wiring: <b>WAGO 734-204</b>
24V DC Power	 1    2	Input Power 1 – 0V 2 – 24V DC  Connector for wiring: <b>WAGO 231-302/026-000</b>

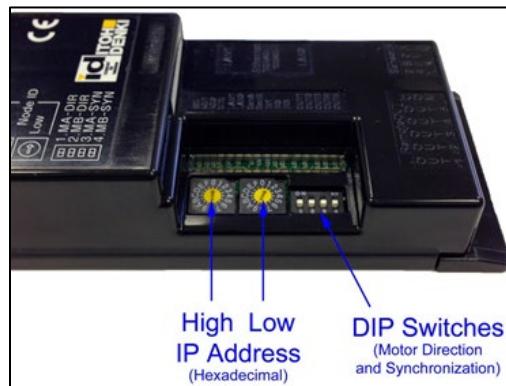

### 15.7.2: Right ("B") Side

Connection	Pin Outs	Description
Motor B	 1      10	<p>Brushless DC Driver When configured as a discrete output (NPN, sinking, only): 3 – Discrete output U (IB-E04F pins 3 &amp; 4) 4 – Discrete output V (IB-E04F pins 5 &amp; 6) 5 – Discrete output W (IB-E04F pins 7 &amp; 8) See "Precaution: Motor Port Discrete Output Wiring" below.</p> <p>Connector for wiring: <b>JST XHP-10</b> (IB-E04F XHP-12) Included with motorized roller</p>
Sensor B	 1      4	<p>1 – 24V DC (550mA max) 2 – Sensor input (35mA max) 3 – 0V 4 – Sensor alarm input (35mA max)</p> <p>IB-E01: Inputs are auto-sensing, responding to either PNP (+24V DC) or NPN (0V) signals. In the normal state, the input pins have a <b>+12V DC reference</b>.</p> <p><b>IB-E03B and IB-E04F:</b> Signal types are set as PNP or NPN from factory. Noted as a "-P" or "-N", respectively (e.g. IB-E03B-P)</p> <p>Connector for wiring: <b>WAGO 733-104</b></p>
Remote Outputs (Auxiliary)	 1      6	<p>1 – Remote output 1, 1A max 2 – Remote output 2, 1A max 3 – Remote output 3, 20mA max 4 – Remote output 4, 20mA max 5 – Remote output 5, 20mA max 6 – Common (24V DC for PNP or 0V for NPN)</p> <p>Connector for wiring: <b>WAGO 734-206</b></p>
LAN (1 & 2)	 8      1	<p>1 – Tx+ 2 – Tx - 3 – Rx + 4 – n/a 5 – n/a 6 – Rx - 7 – n/a 8 – n/a</p> <p>Connector for wiring: <b>RJ-45</b></p>

### 15.7.3: Rotary Switches and DIP Switches

Switch	Position	Description
IP Address High Byte	0 ~ F	Hexadecimal setting of IP address' last octet. 192.168.1.xxx Example 1: High Byte: "0" Low Byte: "1"
IP Address Low Byte	0 ~ F	Hexadecimal value "01" = 1 (decimal) IP Address: 192.168.1.1 Example 2: High Byte: "A" Low Byte: "7" Hexadecimal value "A7" = 167 (decimal) IP Address: 192.168.1.167
DIP 1	OFF	Default
	ON	Motor A's direction is opposite of configuration, reversed
DIP 2	OFF	Default
	ON	Motor B's direction is opposite of configuration, reversed
DIP 3	OFF	Default
	ON*	Motor A operates when Motor B operates, synchronized
DIP 4	OFF	Default
	ON*	Motor B operates when Motor A operates, synchronized

\* If both DIP switch 3 and 4 are ON, the IB-E is set to factory reset mode. Refer to troubleshooting section for more information.

## 15.8: IP ADDRESS SUBNET

**Default: 192.168.1.xxx**

If a different subnet for the IP address is needed, different from the default 192.168.1.xxx, it can be changed using the Itoh Configurator for EtherNet/IP (ICE).

### IP Address Setting (Last Octet)

The rotary switches set the last octet of the IB-E's IP address. There are 16 positions (hexadecimal base) for each rotary switch.

The following table is available to assist in determining the decimal equivalent of the hexadecimal rotary switch positions.

High Byte		Low Byte	
Position	Base Decimal Value	Position	Base Decimal Value
0	0	0	0
1	16	1	1
2	32	2	2
3	48	3	3
4	64	4	4
5	80	5	5
6	96	6	6
7	112	7	7
8	128	8	8
9	144	9	9
A	160	A	10
B	176	B	11
C	192	C	12
D	208	D	13
E	224	E	14
F	240	F	15

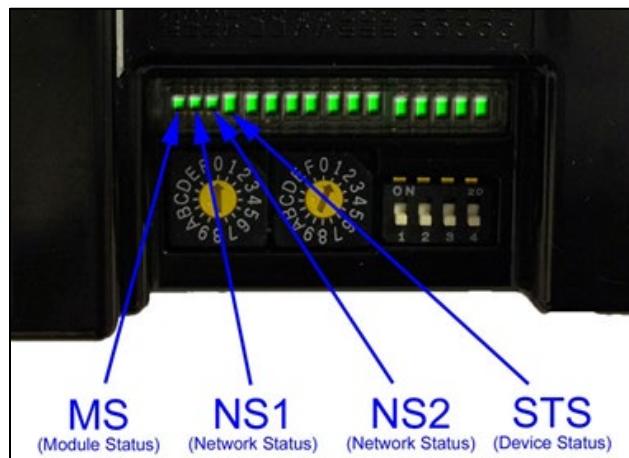

Using the decimal values, the last octet can be calculated.

Base	High Byte	Low Byte	Last Octet
Hexadecimal	C	A	CA
Decimal	192	10	202

### 15.8.1: LED Indicators

See troubleshooting.

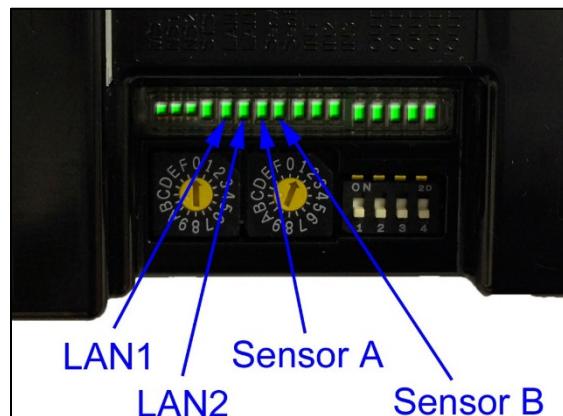

## 15.9: MODULE STATUS INDICATORS

LED	LED indication pattern		Description
	Green	Red	
MS	OFF	OFF	No network power
	ON	OFF	Normal operation
	ON	Flash (1Hz)	No setting on device
	OFF	Flash (1Hz)	Network error at LAN 1 or LAN 2
	OFF	ON	Network error at LAN 1 and LAN 2
	Flash (1Hz)	Flash (1Hz)	Boot up sequence
NS1 & NS2*	OFF	OFF	No communication
	Flash (1Hz)	OFF	Normal operation
	ON	OFF	I/O connection
	OFF	Flash (1Hz)	I/O connection timeout error
	OFF	ON	Duplicate IP address error
	Flash (1Hz)	Flash (1Hz)	Boot up sequence
STS	ON	-	Power ON Network PCB
	Flash (6Hz)	-	Low voltage (< 20V DC) error
	Flash (1Hz)	-	Firmware updating
	OFF	-	No power on network PCB

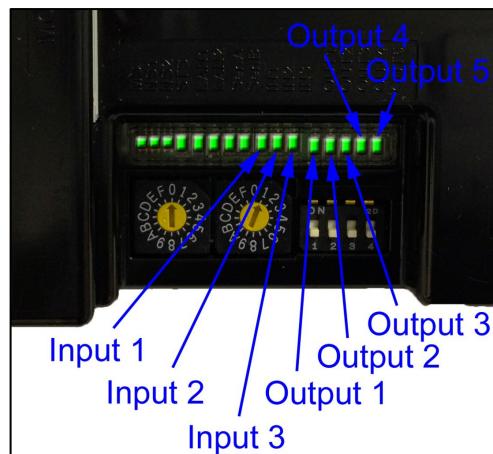

\* NS2 is only on the IB-E01

## 15.10: LAN AND SENSOR STATUS INDICATORS

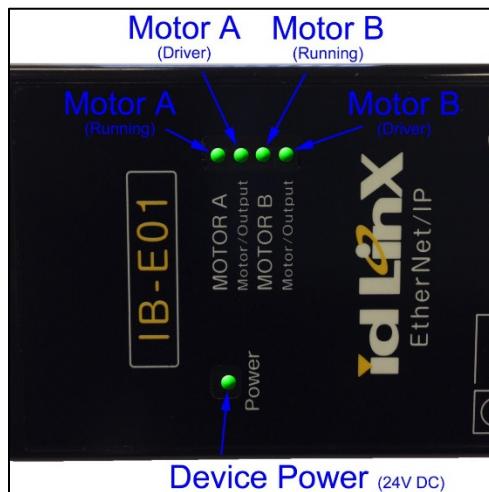

LED	LED indication pattern		Description
	Green	Red	
LAN1 & LAN2	Flash	-	Active LAN communication
	OFF	-	No LAN communication
SenA & SenB	ON	-	Sensor input is active
	OFF	-	No sensor input

## 15.11: REMOTE (AUXILIARY) I/O STATUS INDICATORS

LED	LED indication pattern		Description
	Green	Red	
IN1 ~ IN3	ON	-	Remote input is active
	OFF	-	No remote input
OUT1 ~ OUT5	ON	-	Remote output is active
	OFF	-	No remote output

## 15.12: MOTOR ACTIVITY AND FUNCTION INDICATORS

LED	LED indication pattern		Description
	Green	Red	
Power	ON	-	Normal, power is on
	OFF	-	No power to device
Motor/Output	ON	-	24V brushless DC driver
	OFF	-	Discrete outputs
MOTOR A & MOTOR B	OFF	OFF	Motor is not running
	Flash (1Hz)	OFF	Motor is running, CW
	ON	OFF	Motor is running, CCW
	OFF	Flash (6Hz)	Low voltage error
	OFF	Flash (1Hz)	Motor unplugged error
	ON	Flash (1Hz)	Motor lock error
	OFF	ON	Thermal error
	ON	2 x Flash (0.6Hz)	Back EMF error
	Alternating (1Hz)		JAM error*
	Alternating (6Hz)		Sensor Timer error*

## Chapter 16: TROUBLESHOOTING – IB-E MOTOR DRIVER

Error Type	Priority	Suspected Cause	Suggested Solution	Reset Method	IB-E Logic	Motor
Low Voltage	1	Supply voltage < 20V DC	Maintain supply voltage $\geq$ 20V DC	Automatic	Stop	Run
Fuse blown		Fuse is blown	Replace IB-E	-		
Motor Disconnected		Motor is not connected	Connect motor	Automatic or Manual		
Motor Stalled		Motor does not turn (stalled)	Clear the issue which prevents the motorized roller from turning	Automatic* or Manual		
PCB Thermal		High temperature on circuit board	Allow circuit board to cool	Automatic or Manual		
Motor Thermal		High temperature in motor	Allow motor to cool	Automatic or Manual		
Back EMF (Overspeeding)		Generated voltage from motor $\geq$ 60V DC, at least 0.1 second or $\geq$ 40V DC, at least 2 seconds	Remove the cause of overspeeding, then reset the error from the controller or by cycling 24V DC power	Manual		
Motor port (discrete output) current limit		$\geq$ 4A, at least 0.1 second	Remove the cause for the high current draw	Manual		
Jam		ICE logic element output is active	Remove the cause of error or review ICE logic for output conditions	Based on logic conditions		
Sensor Timer	8					
Sensor Alarm	9	Occurs when the (sensor) Alarm signal is active	Check the sensor or wiring of the sensor connection	Automatic		

*“Automatic” reset from a motor stalled error requires the motorized roller to be turned by hand (manually).*

### Error Reset

Refer to - Error Information to reset error status using ICE.

## 16.1: PHYSICAL BEHAVIOR

**The motorized roller is not running at the set (linear/surface) speed.**

- Check the “Motor” tab under properties for the following:
  - Gear Reduction setting matches the correct motorized roller model
  - Speed setting is for the correct time base
  - Roller Diameter is set correctly for millimeters
  - Roller Speed(s) are set correctly and that the logic is using the correct speed setting output
- Check input power (refer to Chapter 1 – Power Requirements)
- Make sure the motorized roller is mounted properly

**The motorized roller is running in the wrong direction.**

- Check “Motor” tab under properties for the following:
  - Motor Type setting matches the correct roller model
  - Direction is set for the correct default motor direction
- Check DIP switch 1 and/or 2 (refer to Chapter 1 – Rotary Switches and DIP Switches)
- Check that the logic is using (or not using) the motor direction output

**The motorized roller does not run.**

- Make sure “Motor Port Setting” in the “Motor” tab under properties is set as “Motor”
- Check that the logic is using the correct motor output
- Check the status LEDs on the IB-E (refer to Chapter 1 – LED Indicators)
- Check DIP switch 3 and/or 4 (refer to Chapter 1 – Rotary Switches and DIP Switches)
- Make sure the motorized roller is mounted properly

**There is no response to the sensor input.**

- Make sure the sensor is powered
- Make sure the sensor is wired correctly (refer to Chapter 1 – Hardware connections)
- Check the status LEDs on the IB-E (refer to Chapter 1 – LED Indicators)
- Check the logic for the correct sensor input

**There is no response to the remote (auxiliary) input.**

Make sure the input (device) and common are wired correctly (refer to Chapter 1 – Hardware connections and Chapter 2 – General Wiring and Precautions)

- Check the status LEDs on the IB-E (refer to Chapter 1 – LED Indicators)
- Check the logic for the correct remote input

**The remote (auxiliary) output does not turn on.**

- Make sure the output (device) and common are wired correctly (refer to Chapter 1 – Hardware connections and Chapter 2 – General Wiring and Precautions)
- Check the status LEDs on the IB-E (refer to Chapter 1 – LED Indicators)
- Check the logic for the correct remote output

**The Discrete Output from the motor port does not work.**

- Make sure “Motor Port Setting” in the “Motor” tab under properties is set as “Port(Nch)”
- Make sure the output is wired correctly (refer to Chapter 1 – Hardware connections and Chapter 2 – General Wiring and Precautions)
- Check the status LEDs on the IB-E (refer to Chapter 1 – LED Indicators)
- Check the logic for the correct discrete motor port output

## 16.2: SOFTWARE ISSUES

**Read/write (configuration or logic) failure**

- Check the IP address settings on the IB-E (refer to Chapter 1 – Rotary Switches and DIP Switches)
- Check the IP address setting in ICE (refer to Chapter 5 – Project Tree)
- Check the PC’s IP address (refer to Chapter 6 – Property Setting)
- Check the PC’s firewall settings (refer to Chapter 4 – Windows Firewall)
- Make sure the IB-E has had enough time to reboot between consecutive writes/downloads.

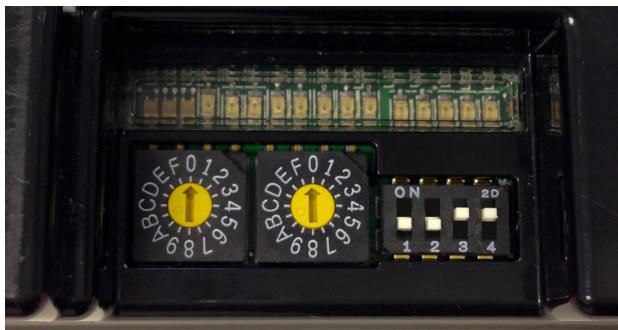

**Monitor not responding to status changes**

- Check the IP address settings on the IB-E (refer to Chapter 1 – Rotary Switches and DIP Switches)
- Check the IP address setting in ICE (refer to Chapter 5 – Project Tree)
- Check the PC’s IP address (refer to Chapter 6 – Property Setting)
- Check the PC’s firewall settings (refer to Chapter 4 – Windows Firewall)
- Make sure the IB-E has had enough time to reboot between consecutive writes/downloads.

## 16.3: MODULE RESET

The module can be reset to factory defaults. Normally, this is not necessary.

1. Power OFF the IB-E, set both rotary switches to “0”, set DIP switches 1 and 2 to the OFF position, and set DIP switches 3 and 4 to the ON position.

2. Power ON the IB-E and wait for the central LED indicators to light up.

3. Power OFF the IB-E and set the rotary switches and the DIP switches to the previous (or other operational) settings.
4. Power ON the IB and use as normal.

See Itoh-Denki IB-E and ICE Manual for additional information: <http://itohdenki.com/>

## Chapter 17: ITR MAINTENANCE & TROUBLESHOOTING

### General Preventive Maintenance

Preventive maintenance will save expensive downtime, wasted energy costs, and increase life of components. An accurate record keeping system will track component servicing history. Periodic maintenance intervals may vary with load, speed, hours of operation, ambient temperature, humidity, etc. Intervals can be established by fairly frequent maintenance at first, and then lengthens the intervals as justified by observation of need based on history. The following schedule is based on 5 days per week, 8 hours per day operation under normal conditions.

#### Daily

- Listen to everything for unusual noises or vibration.
- Visually inspect to see that conveyor sections are clear and free of debris.
- Check to see that all safety guards are in place.
- Check for loose bolts or parts.
- Listen for air leaks.

#### Weekly

- Check for proper PSI on air regulators.
- Check air filter bowls for accumulated water.

 <b>WARNING</b>	
	<ul style="list-style-type: none"><li>• Prohibit walking or riding on conveyor by anyone.</li><li>• Care should be taken when servicing any conveyor to prevent accidental injury.</li><li>• All moving parts are potentially dangerous.</li></ul>

### Air Systems

The best preventive maintenance for any air operated device is clean air. Dirty air will make pneumatic devices sticky, and they will not operate properly. To ensure the continued performance of filters, monitor filter / regulator bowl drain every week.

To manually drain the bowl, push the push button at the bottom of the bowl. Let all accumulated liquid drain until you hear air escaping.

<b>⚠ WARNING</b>	
	<ul style="list-style-type: none"><li>• Do not perform maintenance on the conveyor until the start-up controls, including motor safety switches, are locked out and cannot be turned by any person other than the one performing the maintenance.</li><li>• If more than one member of a crew is working on the conveyor, EACH CREW MEMBER MUST HAVE A LOCK ON THE POWER LOCK OUT. The air pressure must be turned off to the work area. All pneumatic devices must be de-energized to prevent accidental cycling of the device.</li><li>• Check the loosened parts have been retightened and all guards reinstalled.</li><li>• Make sure personnel are clear of all conveyor equipment before restarting the system.</li></ul>

## 17.1: INTELLIROL TROUBLESHOOTING GUIDE CONTINUED

	<u>Problem</u>	<u>Possible Cause</u>	<u>Remedy</u>
1.	Power Roller does not turn	ITR roller not properly installed  Too many slave rollers connected to drive roller  Power Cable extensively twisted  Check that the Power Moller's shafts are properly mounted with the applicable bracket(s). Proper mounting is required for tube rotation.	Check that the Power Roller is properly inserted into the frame. Adjust as necessary  Check the tube and end caps are not contacting the frame, side rails, or other parts. Power Roller should be allowed to move freely  Inspect MDR zone to ensure proper number of idlers is adequate related to the Powered Roller. Refer to IOM Manual for additional information  Inspect cable for kinks or cracks in wiring.  For FE series motors one bracket securing the cable side shaft. For FS / FP / FH series motors two brackets securing both cable side and spring loaded shafts
		When slave driving idler rollers check that the number of idlers driven is adequate for the particular model of Power Roller being used.	Check air pressure on take up assembly. Make sure belt tension is proper.
		Check that the power cable is in good condition, with no twisting or severe kinks in the cable that would indicate broken wires. Also check for any cuts in the power cable or wires near the connector end.	Locate and correct interference
			Install belt properly
2.	LED status	Red LED OFF, Green LED OFF, Orange LED OFF  Red LED ON, Green LED ON, Orange LED ON if sensor is blocked	Check that the power supply is on.  Check that the card is correctly wired. Reference IOM manual.  Measure the voltage, stable 24V DC is required.  Check that the motor connector is properly plugged into the card then cycle the run / sensor signal.  Thermal protection active – motor or card reached thermal limit, motor will not operate until one minute after the card, or motor has cooled down below thermal limit. Consider possible causes of why the Power Roller is reaching thermal limit; cycle times, ambient temperature, load changes, roller not turning freely, etc. Do not remove power to the card to reset the error, damage may occur

	<u>Problem</u>	<u>Possible Cause</u>	<u>Remedy</u>
		Red LED OFF, Green LED ON, Orange LED ON if sensor is blocked	Check that the sensor is properly wired in the correct position and is the proper voltage. Reference IOM manual.  If the run signal is coming from a device on a separate power supply check that the 0V lines are connected between the device's power supply and the driver cards power supply.  If using a run signal check the wiring to CN2 is in the correct position and wired correctly, see page 4 of the manual. Also check that dip switch 2-8 is ON for run.  If card is set to zone begin, dip switch 2-6 ON and the downstream zone is stopped and occupied, then the roller will not run. If card is set to zone end, dip switch 2-6 OFF, zone will accumulate product at the sensor. Reference IOM manual.  Replace roller
3.	Flashing LED	Many options	Refer to IOM Manual for detailed information OR refer to appropriate ITOH Denki driver card manuals for additional options.
4.	Rollers "dancing" or spinning uncontrollably	Too many zones on one ITR control circuit	Set direction blocking dip switch setting. Refer to IOM Manual for additional information.
		Power Supply not centered within the string of zones	Locate and Adjust Power Supply to correct current supply issue
		Supply of power not equally distributed	Set card to Basic Accumulation. Refer to IOM Manual for additional information.
		Mixture of driver cards	Within the ITR transportation product line you can only use FP or FN cards within a string. Reference IOM Manual for additional information
		Power Supply Issue	If power supply is not purchased from MHS Conveyor, please consult manufacturer's operation directions.
		Multiple connected Power Supply units	0V line of all power supplies connected within a conveyor "unit" need to be connected. Reference IOM for additional detailed information
5.	Infeed zone not activating or running	Need input signal	Install MHS Conveyor start eye kit, or provide 24V run signal
		Loose connection between driver cards	Inspect, and adjust, connection cables as necessary
6.	Discharge zone not releasing	Down flow sending not providing "release" signal	Make sure photo eye and reflector are in alignment
		No "release" signal being provided	Use PLC connection, or Photo Eye & Reflector to provide zone with discharge open signal.
7.	One Zone not turning	Loose wire connection	Check all stranded wires to ensure they are inserted properly
		Loose connector cable	Check all quick connection within power harness to ensure they are properly connected.

	<u>Problem</u>	<u>Possible Cause</u>	<u>Remedy</u>
8.	Driver Card continuously faulting	Poor supply of power	Inspect to see if power supply is transmitting correct voltage
		Power Supply unit not wired correctly to the 24V supply line	Inspect termination points to ensure proper wiring. Adjust accordingly. Reference IOM Manual for additional information.
		Bad bearing in wheel bracket or slave roller	Replace worn out component to relieve the extra stress on ITR roller.
9.	Rollers are turning slowly	Too many zones are connected to the Power Supply unit	Consult IOM Manual to ensure the proper configuration between Driver Cards and Power Supply unit.
		Wrong dip switch setting on driver card	Check dip switch setting of 1-6 is properly set to OFF for internal speed (rotary switch control) Refer to IOM Manual for additional settings.
10.	Driver cards faulting regularly in UBT	Programming issue. Transfer belt rollers running 24/7	ITR rollers driving the transfer bands only need to run when signal is provided to UBT to divert product.
11.	Thermal Limit reached	Driver Card or Roller are over heating	Check the ambient temperature. Consult IOM Manual for acceptable temperature ranges
		Back plate of driver card not touching conveyor frame	Inspect mounting plate/conveyor surface to ensure complete surface connection for maximum heat dissipation.
		Excess friction or drag on motorized roller	Inspect area around roller to ensure nothing is rubber or lodged by the roller causing extra friction.
12	Electric Lift	Lift not working	Check switch to motors are properly set Check EZ24 Card settings

## Chapter 18: INTELLIROL REPLACEMENT PARTS

### 18.1: REPLACEMENT PARTS IDENTIFICATION

This section is used to identify parts that may require replacement during the life of the conveyor. Parts which specifically pertain to IntelliROL are included with illustrations.

A "Recommended Spare Parts List" is published for all conveyor orders of \$20,000 or more. This spare parts list is sent to the purchaser approximately (2) weeks after the order is received. It includes part numbers, description, pricing and recommended quantities to be kept on hand for maintenance.

If you are unable to locate this document another may be obtained by contacting the MHS Conveyor Lifetime Services at 231-798-4547 or Fax 231-798-4549.

### 18.2: SPARE PARTS PRIORITY LEVEL EXPLANATIONS

#### Level #1

**Failure of a priority level #1 spare part ("A" level part) may cause major disruption of system performance.**

Priority level 1 spare parts must be on-hand, and available to be replaced in the event of a component failure that could shut down a critical function of a conveyor system.

Priority level 1 spare parts include motors, gear reducers, gearmotor, motorized rollers, air solenoid valves, and related components. The majorities of these parts are purchased from MHS Conveyor vendors and carry their own warranties through these vendors. For more warranty information, see MHS Conveyor Equipment Warranty.

#### Level #2

**Failure of a priority level #2 spare parts ("B" level part) usually is gradual and should not cause a major system disruption.**

Priority level 2 spare parts are parts required for smooth system operation and preventative or regular mechanical maintenance.

Priority level 2 spare parts include roller chain, sprockets, belt pulleys, rollers, air cylinders, and other related parts whose failure should not stop a conveyor system suddenly. These parts tend to wear out gradually and are not known to fail suddenly.

#### Level #3

**Priority level #3 parts ("C" level part) rarely fails and are easily obtainable.**

Priority level 3 spare parts are parts that rarely fail or maybe optionally used by the customer.

## 18.3: REPLACEMENT PARTS - ITOH FE60 MDR

REPLACEMENT PARTS for ITOH FE-60 MOTORIZED ROLLER STANDARD ASSEMBLIES				
Item #	Description	1) FIXING BRKT HEX AXLE-UP	Replacement Rollers	Description

E0009905	CABLE,CAT5E 14' GRAY	COMM. CABLE BETWEEN
E0009904	CABLE,CAT5E 25' GRAY	COMM. CABLE BETWEEN

## 18.7: RUN SIGNALS FOR CB-016 DRIVER CARD

RUN SIGNAL HARNESS FOR CB-016 DRIVER CARD		
Item No.	Description	Application
1144782	ELEC,ITR ACCUMULATION CURVE,1 MR, CB-016 PRESSURE	USED TO POWER (1) ITR
1144783	ELEC,ITR ACCUMULATION CURVE,2 MR, CB-016 PRESSURE	USED TO POWER (2) ITR
1146833	ELEC,ITR ACCUMULATION CURVE,3 MR, CB-016 PRESSURE	USED TO POWER (3) ITR
1146832	ELEC,ITR ACCUMULATION CURVE,4 MR, CB-016 PRESSURE	USED TO POWER (4) ITR

## 18.8: COATED ROLLERS WITH PVC SLEEVE

COATED ROLLERS - COMPLETE ROLLER WITH PVC SLEEVE		
Item No.	Description	Application
<b>Non-Motorized Roller</b>		
1134693	ROLLER, ITR-16BF-1.9" DIA-2G-CTD-PRBG-1/16" PVC SLEEVE	PVC SLEEVE PER ROLLER
1132204	ROLLER, ITR-22BF-1.9" DIA-2G-CTD-PRBG-1/16" PVC SLEEVE	PVC SLEEVE PER ROLLER
1131724	ROLLER, ITR-28BF-1.9" DIA-2G-CTD-PRBG-1/16" PVC SLEEVE	PVC SLEEVE PER ROLLER
1140369	ROLLER, ITR-34BF-1.9" DIA-2G-CTD-PRBG-1/16" PVC SLEEVE	PVC SLEEVE PER ROLLER
<b>Motorized Roller</b>

1140376	ROLLER, ITR-22BF-1.9" DIA-2G-CTD-MDR-1/16" PVC SLEEVE	PVC SLEEVE PER ROLLER
1140377	ROLLER, ITR-28BF-1.9" DIA-2G-CTD-MDR-1/16" PVC SLEEVE	PVC SLEEVE PER ROLLER
1140378	ROLLER, ITR-34BF-1.9" DIA-2G-CTD-MDR-1/16" PVC SLEEVE	PVC SLEEVE PER ROLLER

## 18.9: GENERAL CABLES, CONNECTORS, & KITS

GENERAL CABLES, CONNECTOR, & KITS		
Item No.	Description	Application
1167713	KIT,CTRLS-PE ZONE START-HB-FIELD MOUNT	USED TO START HB-510 DOWNSTREAM ZONE
1167714	ASY,CTRLS-PE ZONE START-HB-FACTORY MOUNT	USED TO START HB-510 DOWNSTREAM ZONE
1125371	KIT,CH TRANSITION C6 TO CRUZ - BOTH SIDE	CH TRANSITION C6 TO CRUZ
1152538	ASY,CTRLS-PRSS SWTCH-CB TO NBC-FACTORY MOUNT	USED FOR CURVES TO INTERFACE WITH NBC CHARGE END
1157661	ASY,CTRLS-PRSS SWTCH-HB TO NBC-FACTORY MOUNT	USED FOR CURVES TO INTERFACE WITH NBC DISCHARGE
1207178	ELEC,TR,POWER SUPPLY-SPICE INSTALLATION	USED FOR SPICE INSTALLATION
1120174	CONNECTOR, SIGNAL SPLICE	USED WITH RED RELEASE SIGNAL HARNESS

## 18.10: ITR 24VDC POWER HARNESS

INTELLIROL 24VDC POWER HARNESS		
Item No.	Description	Application
1102286	HARNESS,ITR-POWER-10AWG-10.5'	24VDC POWER CABLE TO DRIVER CARDS
1102287	HARNESS,ITR-POWER-10AWG-8'	24VDC POWER CABLE TO DRIVER CARDS
1102288	HARNESS,ITR-POWER-10AWG-5.5'	24VDC POWER CABLE TO DRIVER CARDS
1102289	HARNESS,POWER,10AWG,12.5' A=12.5',B=12	24VDC POWER CABLE TO DRIVER CARDS
1129502	HARNESS,ITR-POWER-10AWG-12.5'	24VDC POWER CABLE TO DRIVER CARDS
1143291	HARNESS,ITR-POWER-10AWG-10'-MALE-PIGTAIL	POWER CABLE W/ MALE CONNECT ONLY
1145665	HARNESS,ITR-POWER-10AWG-10'-FEMALE-PIGTAIL	POWER CABLE W/ FEMALE CONNECT ONLY
1161502	HARNESS,ITR-PWR INTRPT-10AWG-4"-COMMON CONDUCTOR	USED BETWEEN POWER SUPPLIES TO CONNECT COMMONS
1138166	HARNESS,ITR-POWER-10AWG-33'-(10 METER)	24VDC POWER CABLE TO DRIVER CARDS
3M67	CONNECTOR, POWER SPLICE 10 AWG	---
<b>MALE/MALE POWER HARNESS</b>		
1141545	HARNESS,ITR-POWER-10AWG-4"-MALE/MALE CONN	USE TO CHANGE POWER FLOW
1134347	HARNESS,POWER,10AWG,1' MALE CONN BOTH ENDS, GENDER BENDER	USE TO CHANGE POWER FLOW
